Introduction

October 31, 2023

This document gives an overview of the steps in preparing a Participatory Forest Resource Management Plan (PFRMP). During the first orientation workshop in Peshawar (October 18-20) PFRMP handouts on each step were shared. In this document the handouts are collected and organized per step of the planning process for reference by the planning teams in the 3 pilot villages where the planning process will be tested. Some handouts and tables in the handouts have been adjusted following the observations made by the participants in the orientation workshop. This collection of handouts will form the basis for a manual on PFRMP. The steps of the planning process and the formats are based on the experience of the Forest Department with community engagement in management of forest and rangeland, notably REDD+ model plans, Integrated Natural Resource Management Project, Support to Forest Management Centre, Forestry Sector Project, the Social Forestry Project Malakand-Dir and the Environmental Rehabilitation Project.

The field experience in the 3 pilot villages will help to contextualize the approach and to adapt the tables to the field realities. The field manual will be drafted on the basis of the feedback from the field. Afterwards, it will be translated in Urdu.

The document starts with general background information on the participatory planning process. Next, the planning steps will be explained.

June 1, 2024

The 0-draft manual has been updated with the inputs of workshops with DFOs, SFDO's, ADs and CDOs CDE&GAD and Core Planning Support Team and first experiences in the pilot Planning Units of Agra (Malakand Division), Ghari Chandan (Peshawar Division), and Bajmori (Kaghan Division).

December 11, 2024

Ms Salima Azfal and Mr Ihsan Ullah of the CDE&GAD and Core Planning Support Team together with Neshmiya Khan (consultant ESMF) have updated the manual integrating ESMF in the planning process based on field experience.

Frans Werter, consultant Participatory Planning

1. Background information

1.1 Legal and policy framework

The Khyber Pakhtunkhwa (NWFP) Forest Ordinance 2002 provides the legal framework for protection, conservation, management, and sustainable development of forests and natural resources in the province. The *objectives* of the ordinance include:

.....

- (c) involvement of local communities and interested parties in the formulation and implementation of forest policies and forest management plans;
- (d) definition of role and obligations of Government, and concessions, rights, duties and obligations of local communities;

.....

Guiding principles of the ordinance are that:

- (a) the forests shall be effectively protected, conserved, managed and sustainably developed in due recognition of their ecological significance and economic value for the well-being of the present and future generations, and for this purpose forest protection, administration and management mechanisms shall be strengthened;
- (b) appropriate production and security of goods and services shall be achieved at the level of local communities, concerned watersheds, as well as at the provincial level, while continually improving the productivity of forests and safeguarding the national and international interests regarding forests and forestry;
- (c) forests and other natural resources shall be managed as an integral part of the ecological system of which these are a part;
- d) direct, strong and effective participation of local communities in the sustainable development and management of forests shall be secured and their concessions, rights, duties and obligations shall be clearly defined;**
- (e) the role of Government regarding sustainable development of forests shall, as far as possible, be confined to **preparing management plans**, setting out objectives and criteria, monitoring progress, promoting research and education, and providing advisory services, while interested parties shall be encouraged to undertake a leading role in developmental activities where the forests are owned by the people or where the people are the major right holders; and
- (f) the development of public awareness for proper appreciation of the environmental significance and economic value of forests shall be vigorously pursued.

Supportive rules to the Forest Ordinance are:

- KP Management of Guzara Rules 2004
- (Joint Forest Management) Community Participation Rules 2004
- KP Mazri Control Rules 2004
- KP Forest Produce Transport Rules, 2004

The Community Participation Rules 2004 specify the establishment of Village Development Committees and Women Organizations, as well as the establishment of specific Joint Forest Management Committees. The VDC and WO are responsible to develop a Village Plan

through a Village Land Use Planning Process. For specific areas, i.e., Forest Management Units, a Joint Forest Management Committee may be established that will be tasked to prepare a Joint Forest Management Plan. The Joint Forest Management Plan will be part of the overall Village Plan.

Khyber Pakhtunkhwa has a Forest Policy 1999 and a Rangeland Policy 2014. Both policies promote the sustainable management of forest and rangeland resources through engagement of local communities and the development of the participatory development of Village Land Use Plans.

The 10 Billion Tree Tsunami Project supported by Billion Tree Afforestation Support Project will prepare Participatory Forest Resource Management Plans in the context of the Forest Ordinance, Community Participation Rules, and the Forest and Rangeland Policies.

1.2 Guiding Principles for Participatory Forest Resource Management Planning

The principles for Forest Resource Management Planning are based on laws and policies of the KP FEWD, as well on previous experiences with community engagement in planning and managing forest, rangeland and other natural resources in numerous projects within the province.

1. Participation and inclusion

All owners or users of forest or rangelands in the community should be involved in planning, implementation, monitoring and evaluation of Forest Resource Management Plans. This includes male and female community members, as well as owners, seasonal and permanent users of the natural resources. Without involvement of all stakeholders and catering for the needs of all interest groups no sustainable Forest Resource Management Plans can be prepared and implemented.

2. Social Organization

All owner and user groups in a Planning Unit should be represented in an organization for the management of forest, rangeland and other community natural resources, i.e., in case of the BTASP Village Development Committees (VDC) for men; Women Organizations (WO) for women at the level of the Planning Unit. Through a VDC and a WO all sections in a community are able to jointly plan for the management of their forest, rangeland and other community natural resources and implement the plan. For specific areas in a community, called Management Units, Management Committees may be established.

3. Integrated approach

The Participatory Forest Resource Management Plan covers all vegetation types and uses of the forest and rangeland areas. It focuses on trees, shrubs, forbs and grasses and use of these resources for fuel, fodder, timber or other construction materials as well as other forest products. Different forms of land use in different areas may affect each other, for example uncontrolled grazing may affect a plantation area. All community needs catered for by their natural resources outside the agricultural land will be considered in a PFRMP. Evidently, the production of timber, fuel and fodder on (boundaries of) agricultural fields that may reduce the pressure on the hillsides will be considered part of the PFRMP.

4. *Controlled use*

Management of the forest and rangeland resources requires the controlled use of the area, i.e., what area should be used, how, when and by whom and how decisions on use are enforced. The timing and intensity of use determines potential regeneration and growth of vegetation or seedlings, as well as the productivity of the vegetation in terms quantity and quality. The use of the area in a PFRMP will depend on the management objectives (needs) of the community and the growth cycle of the vegetation, and the sustainable management of the resource base.

5. *Agreed upon distribution of rights, obligations and benefits*

Successful sustainable management of the forest and rangeland resources depends on agreement between all users and owners of the area on the distribution of rights, obligations and benefits. If a particular section of the community feels that it is not fairly benefitting from the forest or rangeland resources compared to its required contribution to sustain the resources, it may not follow the management rules as will be laid down in a management plan and damage the resource base. The VDC and WO at PU level and Management Committees at the level of management units have an important role in getting agreement between the community sections on distribution of rights, obligations and benefits.

6. *Gender based*

Women are an important direct or indirect user of the forest or rangeland resources, and consequently important in management of the resources. Their interests, contribution and sharing in the benefits of the resources requires their participation in planning, implementation and monitoring and evaluation of the Forest Resource Management Plan. Women are organized in a WO through which they can articulate their interests and points of view on management of natural resources.

7. *Poverty orientation*

The poorer sections of the community are mostly more dependent for their livelihood on forest and rangeland resources. They tend to easily over-exploit the natural resources to make their daily ends meet without long term perspective of sustainable management. In the Participatory Forest Resource Management Plan special attention will be given to the needs of the poorer sections of the community and their involvement in the management of the resources and distribution of benefits.

8. *Environmental and Social Management Framework (ESMF)*¹

The ESMF is one of the key principles for formulation of the PFRMP under the BTASP. It outlines a risk matrix for each environmental and social standard to identify, prevent, and mitigate adverse impacts of BTASP activities. It ensures stakeholder engagement, including Free, Prior, and Informed Consent, and provides measures to manage risks affecting communities and KP FD staff.

a. *Free, Prior and Informed Consent*

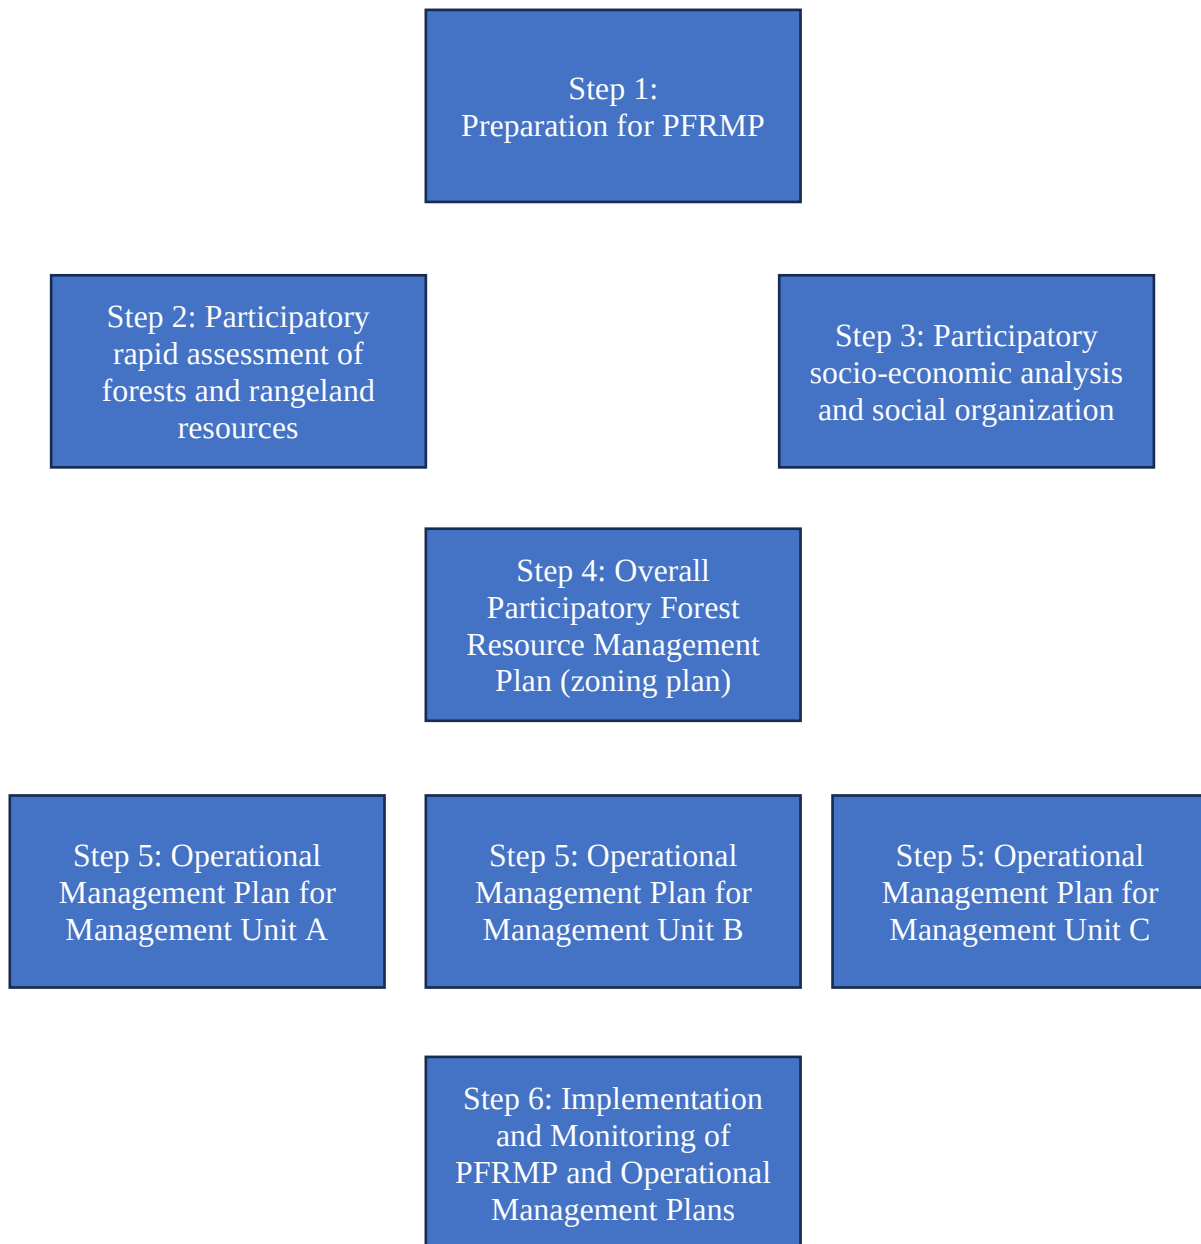

¹ BTASP ESMF Framework and ESMF Guide Book

All individuals of the concerned village sections (owners and users; male and female) are informed beforehand on the objectives, procedure for development and contents of the overall Participatory Forest Resource Management Plan and Management Plans with interventions for specific areas, called Management Units. The CDOs (Male / Female) at divisional level will play the role of FPIC facilitator. The responsibility of FPIC facilitator attached as an annexure – 21.

b. Community Engagement

In the plans possible negative social and environmental risks of the final interventions and their impact on individual households and communities are identified, jointly with the community members and mitigation measures are proposed. The VDC, WO, Management committees and individuals express their consent and agreement with the plans in written form before implementation. Any individual not agreeing with the plans may resort to a complaint and redressal procedure. The procedure will be communicated to all community members.

2. Overview of steps of Participatory Forest Resource Management Planning

2.1 Short description of each step of Participatory Forest Resource Management Planning

A short description of each step of the PFRMP including ESMF (tools and actions) are attached herewith as an Annex 20.

Step 1: Preparation for Participatory Forest Resource Management Planning

The DFO notifies a Planning Team. The Planning Team mobilizes and creates awareness among the community. Also, the Planning Team prepares a stakeholder analysis.

Step 2: Participatory rapid assessment of forest and rangeland resources

The Planning Team assesses the availability and condition of the forest and rangeland condition. It also identifies potential sites and interventions.

Step 3: Participatory socio-economic analysis and social organization

3a. Participatory socio-economic analysis

The Planning Team analyses the socio-economic situation including ownership, use and control of forest and rangeland resources, including social institutions and relationship among stakeholders related to natural resources within the potential project sites and proposed list of activities

3b. Social Organization

The Planning Team establishes or strengthens a Village Development Committee and Women Organization

Step 4: Drafting of overall Participatory Forest Resource Management Plan (zoning plan) and ESMF Risk Mitigation Plan.

The Planning Team drafts an overall PFRMP, and an Environmental & Social Risk Mitigation Plan developed based on the analysis environmental and social risks.

Step 5: Drafting of Operational plan for each Management Unit (technical plan)

The Planning Team prepares operational management plans. It includes the signing of a form on Free, Prior, Informed Consent by the community.

Step 6: Implementation and Monitoring of PFRMP and Operational Management Plans.

6a. Implementation of PFRMP with its Operational Management Plans

The Planning Team prepares and implements with the Management Committees (MCs) Operational Management Plans, as well as an Environmental & Social Risk Mitigation Plan

6b. Participatory Monitoring of PFRMP with its Operational Management Plans

The Planning Team together with the VDC, WO and MCs monitor the results and implementation of the Operational Management Plans, as well as an Environmental & Social Risk Mitigation Plan

2.2 Timeline for preparation of a PFRMP

Table: overview of number of days per step

Step	Number of days		Lead time
	Office	Field	
1. Preparation	2	6	4 – 6 weeks
2. Participatory analysis of forest and rangeland resources	4	6	3 -4 weeks (step 2 and 3 will be implemented simultaneously)
3. Participatory socio-economic analysis and social organization	4	8	
4. Overall Participatory Forest Resource Management Plan	4	4	3 – 4 weeks
5. Operational Plan per Management Unit	6-8	6-8	3 weeks upwards (depending on number of interventions)
6. Implementation and Monitoring	Dependent on step 5	Dependent on step 5	

A more detailed timeline is given in the specimen for a workplan for Planning Teams (see Annex 1).

The timeframe given in the table is indicative based on previous experiences. You may adjust your planning based on your field experience on the condition that you share this and discuss the adjustment with the Core Planning Support Team and the DFO.

2.3 Filing of data

For the preparation of the Participatory Forest Resource Management Plan and future reference it is necessary to systematically file all data collected. In the Divisional Office SDFO and CDO (m/f) will maintain files on each Planning Unit. Per Planning Unit data will be kept physically and electronically. This will include all information collected, maps, all formats for planning and reporting of community meetings as well as all agreements between the community and the Forest Department. A well-organized filing system is the basis for monitoring, as well as for presentations to the DFO, Conservator, Chief Conservator, Secretary of Forests, and all other officials.

Data will be stored per phase in the planning process:

Step 0: Pre-selection of Planning Unit

Step 1: Preparation for Participatory Forest Resource Management Planning

Step 2: Participatory rapid assessment of forest/rangeland resources

Step 3: Participatory socio-economic analysis and social organization

Step 4: Drafting of overall the Participatory Forest Resource Management Plan (zoning plan)

Step 5: Drafting of Operational Management Plan for each management unit (technical plan)

5.1 Management Unit 1

5.2 Management Unit 2

5.3 Management Unit 3

5.4

Step 6: Implementation and Monitoring of PFRMP and Operational Management Plans for each management unit

6.1 Management Unit 1

6.2 Management Unit 2

6.3 Management Unit 3

6.4

2.4 Formats for preparation and reporting on community meetings

Each visit to the planning unit will be prepared and the results will be documented in formats. The formats will be filed. For formats on preparation and reporting of community meetings see annex 2. During the preparation of meetings, the planning team will discuss the agenda, the division of labour between planning team members, the materials needed for the meeting and the logistics.

Step 1: Preparation for Participatory Forest Resource Management Planning

What	Who		How	Remarks/ Tools to be used
	Responsible	Support		
Step 1: Preparation				
Office				
1. Preparation of workplan for PFRMP			Use the workplan format	Annexure-I (PFRMP Work Plan Format)
1.1 Notification of planning team	DFO			
1.2 Workplan based on manual	SDFO and CDO (m/f)	F, FG, FFE		
1.3 Collection of formats for PFRMP and organize per step	SDFO and CDO (m/f)		PFRMP manual	
2. Preparation of GIS base map	SDFO		Email / official letter to GIS unit PMU	A2 size
3. Collection and analysis of secondary data	SDFO and CDO (m/f)		Checklist annex Check FD files (e.g. VLUP) Contact line departments and local government dept	
Field				
4. Community mobilization meeting	CDO (m/f) (preparation together with SDFO and feedback to DFO and obtain approval	F, FG, FFE	Meeting formats for preparation and reporting	ESMF Action-I FPIC (i- Annexure-2) (Community Meeting Performa) (Annexure-iv)
5. General community meeting	CDO (m/f) SDFO (preparation/ reporting in office)	F, FG, FFE	- Meeting formats for preparation and reporting - GIS base map - Sheets/markers for social mapping - Format for stakeholder analysis - Checklist eligibility criteria	
Office				

6. Go/no-go decision-making meeting on working in PU	DFO, SDFO and CDO (m/f)		- Filled formats/ maps from field visit	
Field				
7. Awareness raising meetings	CDO (m/f)/ FPIC facilitator	SDFO, F, FG, FFE	- Meeting formats for preparation and reporting - Leaflet - ESMF (FPIC) stakeholder engagement	FPIC Action-I Annex-ii (Community Meeting Performa)
8. Collect GPS coordinates of boundaries of PU	SDFO	F, FG	- GIS base-map - Community map - GPS	
9. Community meeting(s) for CoC (Consent of Cooperation)	CDO (m/f)	SDFO, F, FG, FFE	- Minutes of community meeting (including points from manual) - Written Resolution FPIC (Consent of Cooperation)	ESMF-Action-I, FPIC (Written Resolution FPIC (Consent of Cooperation))
Office				
10. Sharing PU boundary coordinates with GIS lab	SDFO		Email to GIS unit PMU with field data	
11. Organizing files and data	CDO (m/f) SDFO			Per PU Per Step
12. Reporting to DFO	SDFO CDO (m/f)			

Objectives

- Planning Team prepared for the Participatory Forest Resource Management Planning Process
- Eligibility of Planning Unit selected confirmed and its boundaries defined
- Awareness created with the community members in the planning unit on Participatory Forest Resource Management Planning.

Result

- Written Resolution (Consent of Cooperation) adopted by representatives of all community sections (owners and users of forest and rangeland resources) in the planning unit on cooperation in the development and implementation of a Participatory Forest Resource Management Plan.

Activities

Office

1. DFO notifies Planning Team (SDFO, CDO (m&f), GIS expert, F, FG)
2. Preparation of a workplan for PFRMP in the selected planning unit
3. Preparation of GIS base map of the planning unit
4. Collection and analysis of secondary data

Field

5. Community mobilization meetings (introductory meetings).
6. General community meeting (stakeholder analysis and social mapping).

Office

7. Go/no-go decision on working in planning unit

Field

8. Awareness raising meetings regarding BTASP, including initial FPIC Stakeholder engagement meetings to inform the communities about ESMF (Free, Prior, and Informed Consent).
9. Collect GPS coordinates of boundaries of PU
10. Community meetings on resolution of cooperation (Consent of Cooperation)

Office

11. Sharing PU boundary coordinates with GIS lab
12. Organizing files and data
13. Reporting to DFO

Below the activities will be explained.

Definition of Planning Unit

A Planning Unit is an area of natural boundaries for which a Participatory Forest Resource Management Plan will be prepared. The boundaries of a Planning Unit are defined by the ownership and use of an area by sections of the community. The Planning Unit is not equal to a revenue or mouza village or area of a local government, neither is it equal to a plantation or enclosure area.

Selection of Planning Unit

The preliminary selection of planning units is done in the DFO office based on matching the selection criteria and the information in the CCFEWD files. The last step in selection of the planning unit is the cross-checking of the criteria in the field. As it has been decided that the revenue village or 'mouza village' is not the unit of planning, the exact boundaries of the planning unit need to be determined based on ownership and use of the area. The cross-check on the selection criteria and the definition of boundaries are part of the activities in step 1.

The DFO notifies the planning team that is responsible to prepare a PFRMP for a particular planning unit. The planning team consists of a SDFO, CDO's (m/f), Forester, Forest Guard and FFE if present. The planning team is accountable to the DFO. The PMU BTASP supports the divisional planning teams in preparation of a workplan and in its activities through its Core Planning Team. It may act as a 'help desk' for the planning team. (see annex 1 format for preparation of Workplan)

The planning team collects all formats for data collection and organizes the formats per step of the planning process. The planning team takes note of the data to be collected.

2. Preparation of GIS base map of the planning unit

The SDFO requests a base map of the area in which the planning unit is located from the GIS-lab in the PMU by email. The GIS-lab may return a map from the requested area by email. The base map is a larger area in which the BTAP and 10BTTP interventions of the area are located. The boundaries of the planning unit are not known yet. The base map is an A2 size map on which the BTTP and 10BTAP interventions are indicated (and if available those of other forestry interventions in the area). Also, main settlements are plotted on the map.

Note:

The map may consist of two A3 parts that can be taped together in the sub-divisional office to an A2 map. The A3 size parts can more easily be printed and copied in the local bazar.

3. Collection and analysis of secondary data.

Information of the revenue village in which the planning unit is located, is gathered from previously collected data like office records, i.e. BTAP, 10BTTP or other interventions, and perhaps a Village Land Use Plan (VLUP) may be available. Also, general village information may be available with the Local Government and Rural Development Department at District level and other departments such as the Livestock and Agricultural Departments.

The availability of information on a particular revenue village or planning unit may facilitate the planning process. However, secondary information will require cross-checking in the field during the planning process. See annex 3 for a format for secondary data collection.

Take note of the natural resource management interventions implemented under previous CCFEWD plans (such as working plan/ VLUP/Management plan/village plan). In step 2 of the planning process the impact of the implementation of these plans will be checked in the field, as well as the management practices of those areas.

Field

1. Introduction to the community: community mobilization meeting

The first meeting with the community is crucial for getting the cooperation of the community. It will need careful planning. The planning team prepares the introduction in a planning meeting using the format for planning of community meetings (see annex 2). During the preparatory meeting of the planning team, it decides whom to contact, when and with what agenda. After the meeting the planning team reports on the meeting using the format for reporting of community meetings (see annex 2).

Objective

Create interest and prepare community for first meeting on Participatory Forest Resource Management Planning

Agenda for community mobilization meeting

- a) Importance of and support for sustainable management of forest and rangeland resources (incl. BTAP/10BTTP interventions)
- b) Indicating importance of sustainable management of forest and rangeland resources for all owners and user groups including women and seasonal, non-resident users
- c) Planning of first meetings (male/ female): invitation of participants, date and time

How to do it?

The male and female CDOs/FFE's together with the Forest Guard and Forester visit the main village and discuss with the VDC and WO or otherwise with elders and women of different sections, and representatives of the local government. They explain that the Forest Department wants to work with the community to improve the management of the forest and rangeland resources with the objectives to improve and sustain their productivity also in the future (get more benefits from the area). Therefore, we intend to develop a management plan with all owners and users of the resources and support the management of the area with technical knowledge and perhaps some joint investments by the community and the Forest Department.

Together with the VDC/WO or elders/influential women a place, date and time is set for a general community meeting with (representatives of) all community sections and representatives of the elected local government (councillors). Generally, the main settlement of the planning unit /revenue village is the starting point for a general community meeting in which the boundaries of the planning unit are fixed.

2. Introduction to the community: general community meeting

In the office the planning team prepares a general community meeting for (representatives of) all community sections including (VDC and WO members -if they already exist), and elected members of the local government using the format for planning of community meetings (see annex 2). A separate meeting for women is organized. After the meetings the planning team reports on the meeting using the format for reporting of community meetings (see annex 2). The planning team will also file all information collected during the meeting.

Objective

- a) Create awareness on PFRMP, 10BTTP and BTASP with VDC/WO or influential/representative men ('jirga') and women
- b) Determine the boundaries of a potential Planning Unit for Participatory Forest Resource Management Planning
- c) Check eligibility of the planning unit
- d) Develop an awareness raising plan together with elders/VDC/WO on PFRMP

Agenda for general community meeting

- 1. Introduction 10BTTP and BTASP
- 2. Determine boundaries of planning unit
 - stakeholder analysis
 - community sketch map of area
- 3. Eligibility of Planning Unit
 - checklist with PU selection criteria

- discuss selection criteria
- 4. Awareness raising activities and plan
- 5. Next activities

How to do it?

The planning team divides itself in a male and a female group to organize separate general community meetings. If it is possible to have a joint male and female meeting it will be preferable.

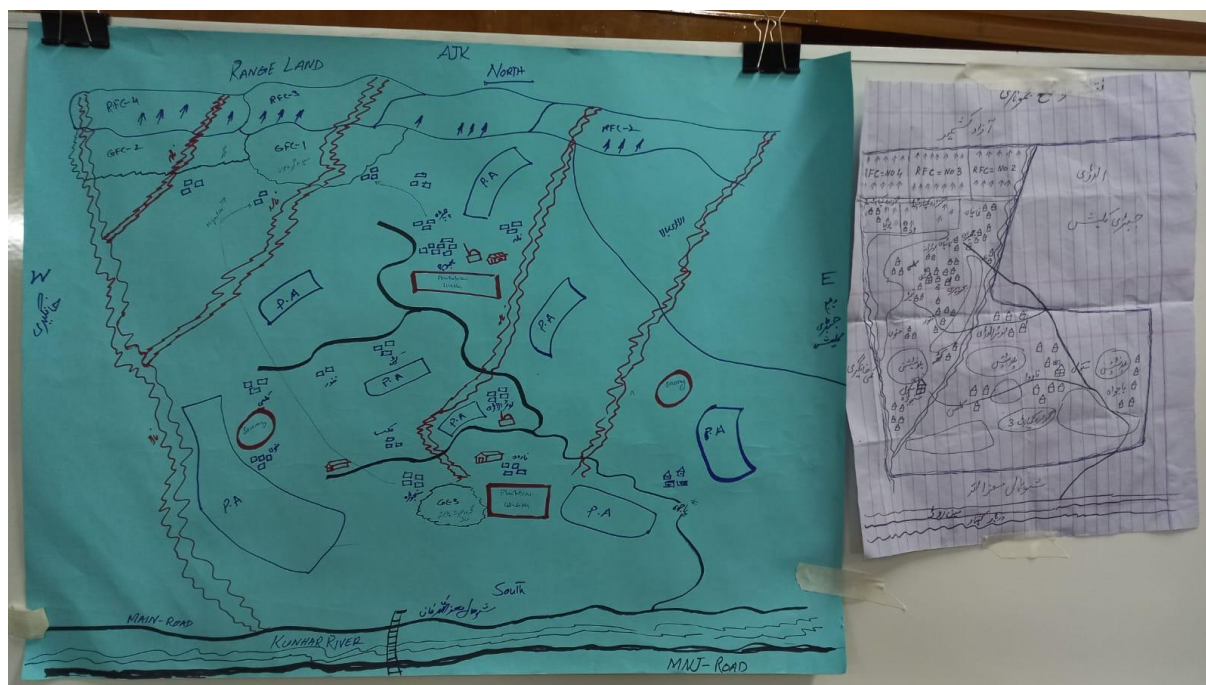

1. Introduction 10BTTP and BTASP

The planning team introduces the objectives of 10BTTP and the BTASP. The team introduces the concept of a Participatory Forest Resource Management Plan. The awareness raising flyer may be used. Also, the planning team explains the concept of working with a planning unit.

2. Determine boundaries of planning unit

The planning team determines the boundaries of the potential Planning Unit by making a community map and doing a stakeholder analysis. If more than 10 community members are present in the general community meeting the participants may be divided in groups that prepare their own stakeholder analysis and make their own community maps. See annex 4 for stakeholder analysis and annex 5 for the preparation of a community map.

Example of community map

3. Eligibility of Planning Unit

The planning team discusses with the participants the criteria for selection of a planning unit for starting a PFRMP using the data collected in the stakeholder analysis and during community mapping. The purpose of this discussion is to confirm the eligibility of the community for PFRMP.

Main selection criteria are (see also annex 6):

- Existence or willingness to create a VDC and WO including representatives of all sections (owners and/or users of the forests and rangelands)
- No major conflicts in the community
- Presence of BTTP or 10BTAP interventions
- At least 100 households in the planning unit
- Not more than 40% of the area controlled by absentee landowners
- Willingness to prepare a Participatory Forest Resource Management Plan and work on controlled use of the forest and rangeland areas
- Willingness to work towards agreement on equitable distribution on rights, obligations and contributions, and benefits

Also, the planning team discusses with the participants what they would consider a logical area for preparing a Forest Resource Management Plan considering ownership and use of the hillsides by the community, i.e., the boundaries of the planning unit.

Be aware

The boundaries of a planning unit are not equal to a potential or existing afforestation area. It is an area based on ownership and use including planted or natural forest areas, but it could also include rangelands or alpine pastures. The possible boundaries of the planning unit are checked based on the data collected.

4. Planning awareness raising sessions

The planning team discusses the importance of awareness raising among all community sections about the coming Participatory Forest Resources Management Planning process. Also, it explains that all community members should know that participating in the development, agreement and implementation of a PFRMP is based on Free, Prior and Informed Consent by community members. Community members not agreeing with the plans can make use of a complaint procedure.

In this general community meeting the planning team agrees with the participants how the various sections can be informed about the PFRMP and what support the VDC/WO or community needs to reach out to the community.

5. Appointment next meetings: awareness raising

The planning team and the participants make an appointment for conducting awareness raising meetings, the next step in the process.

Office

3. Go/No-go decision

Back in the office the planning team analyses the data collected during the general community meeting. Using the matrix in annex 6 the team concludes if the planning unit is suitable for starting the PFRMP process or not. **This is crucial: go or no-go decision!** If the question is answered positively, the planning team discusses the boundaries of the planning unit and SDFO plots the boundaries on the GIS map. The boundaries (GPS-coordinates) check in the field when awareness raising meetings are held.

Field

4. Introduction to the community: awareness raising meetings

Objectives

- a) Create awareness on PFRMP and BTASP with all owner and user sections of forests and rangelands in the planning unit, particularly on the process of participatory forest resource management planning and project support, and
- b) Create awareness on FPIC (free, prior, informed consent) with owners and users of forests and rangelands to ensure broad consent about inclusion of both users and owners in management of forest and rangeland resources, and equitable distribution of contributions and benefits (rights and obligations); and explain the possible objection and complaint procedure

Preparation and implementation of an awareness raising sessions

In the office the planning team prepares for awareness raising meetings in the planning unit. Make sure to include all community sections as well as male and female community members. Use the awareness raising leaflet during the meetings. See annex 7 for planning

and reporting on awareness raising activities. If possible, you may take some pictures and file them as 'evidence' of the awareness raising meetings.

Reporting awareness raising meetings

Do not forget to report on the awareness raising meetings and file the reports in the office. The planning team discusses if they have reached out to all community sections satisfactorily or complementary awareness raising activities may be required. If the planning team is satisfied with the awareness raising activities for this initial stage of the planning process, the team may proceed to the next activity: the signing of a Resolution on Cooperation.

Key message for awareness raising

- A Participatory Forest Resource Management Plan (PFRMP) will be prepared with the participation of local communities for a designated area called planning unit. It will encompass not only the protection, sustainable management of the existing plantations and enclosures but also includes the establishment of new afforestation on barren lands, protection of grazing areas, and utilization of the area.
- It will also include other interventions like collection of non-timber forest products such as medicinal plants or mushrooms and potential of tourism in the target areas.
- A PFRMP helps in managing an area in such a way that it also continues to give benefits in the future.
- The community will determine the activities in the PFRMP in cooperation with the Forest Department. It will depend on the community, the forest resources and the desired use of the forest areas. Both the community and the project will contribute to successful and beneficial management of the forest and rangeland area. Therefore, the Forest Department will work with or establish a Planning Unit Committees both for men and women.
- A PFRMP will care for the interests of owners, non-owning users and (seasonal) herdsman, as well as the interests of men and women. It will pay particular attention to vulnerable community members. If the livelihood of vulnerable community members is negatively affected by restrictions in a PFRMP, they will be provided with alternatives so that their livelihood will be maintained.
- All community members (men and women; owners and users) have equal rights to information about the development and contents of the PFRMP. They also have the right to voice their opinion about the PFRMP, demand serious discussions about their views and complain if their interests are not taken in to account.
- If you have questions, feedback or complaints please contact: XXXXXXXXX

The conflict, complaint and grievance redressal procedure (see below) will also be explained during the awareness raising meetings.

Conflict, complaint and grievance redressal procedure

If any community member (men, women or child; residential or semi-residential) feels disproportionally disadvantaged because of the preparation of a FRMP, the community member may refer to the conflict, complaint and grievance procedure. The procedure will follow several steps:

i: Step 1: Presentation of issue to VDC/WO, SDFO/CDO (m/f)

The person concerned or his/her representative can ask to discuss his/her case in a meeting of the VDC/WO, SDFO/CDO (m/f). This request can be in oral or written form. If the case is not satisfactorily solved, a next step can be taken on initiative of the community member. (Time limit for redressal at this stage-07 Days)

ii Step 2: Presentation of issue to DFO and (AD) CDE&GAD (m/f)

The person concerned, or his/her representative can ask to discuss his/her case in a meeting with the DFO and (AD)CDE&GAD (m/f). This request can be in oral or written form. If the case is not solved satisfactorily, a next step can be taken on initiative of the community member. (Time limit for redressal at this stage-14 Days)

iii Step 3: Presentation of the issue to CF, PD (PMU) and Director CDEGAD

The person concerned or his/her representative can ask to discuss his/her case in a meeting with the CF, DPD (PMU) or authorised representative from PMU and Director or Deputy Director CDEGAD. This request should be in written form. The decision of this forum is final. (Time limit for redressal at this stage-30 Day)

5. Collect GPS coordinates of boundaries of PU

SDFO, Forester and Forest Guard will go to the field to collect GPS coordinates of the boundaries of the planning unit. They ask some community members to accompany them during the field visit to guide them.

6. Resolution of Cooperation

Objective

Written resolution adopted by elders/representatives of all sections/khels of the community to work together with the Forest Department/CCFEWD in the development and implementation of a sustainable Participatory Forest Resource Management Plan (PFRMP).

Main elements in the Resolution of cooperation

- Willingness of the community to work with the Forest Department in the preparation and implementation of PFRMP.
- Willingness to organize contributions by and benefit distribution to all owners and users of the planning unit
- Confirmation of absence of major conflicts
- Free, Prior and Informed Consent by the community to start the PFRMP process
- Understanding of a complaint and grievance redressal procedure

How to do it?

The CDOs (m/f) discuss in the community the requirement to formalize the cooperation between the community and Forest Department. They discuss the contents of a Resolution of Cooperation and ask the community or the VDC and WO to draft and sign their own resolution on cooperation. CDOs (m/f) check if all sections listed in the stakeholder analysis have signed the resolution. The CDOs will give the VDC/WO and/or representatives at least one week to discuss the signing of a resolution among themselves before signing.

Office

7. Sharing PU boundary coordinates with GIS-lab

SDFO shares the GPS coordinates of the boundaries of the planning unit with the GIS-lab of the PMU by email. The GIS-lab prepares a map of the planning unit and shares this with the SDFO.

8. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, formats for preparation of field meetings and formats on field reports will be stored in the same file. The formats used for secondary data collection, stakeholder analysis and community mapping will be stored for use in the overall PFRMP.

9. Reporting to DFO

The planning team requests a meeting with the DFO and shares the results of step 1 of the planning process. The DFO checks the results and if deemed necessary requests additional actions to complete this step.

Step 2: Participatory rapid assessment of forest and rangeland resources

Note: step 2 and step 3 can be implemented simultaneously. The SDFO is in the lead for the technical activities in step 2. The CDOs (m/f) are in the lead for the socio-economic analysis and social organization in step 3. For detail role and responsibilities of SDFO and CDOs see annexure – 21 attached herewith.

What	Who		How	Remarks / Tools to be used
	Responsible	Support		
Step 2: Rapid assessment of forest and rangeland resources				
Office				
1. Preparation for data collection				
1.1 Collect map from GIS lab	SDFO	DFO		Email
1.2 Collect plantation and enclosure journals of FD	SDFO			For preparation of field visit
1.3 Analysis of GIS map and journals and decision of locations for field assessment	SDFO	F, FG	Map Plantation and enclosure journals	Share with CDO (m/f)
1.4 Copy of observation sheets and checklist of informal interviews	SDFO	F, FG	Observation sheets in manual Checklist informal interviews	
1.5 Plan field visit with community	F, FG	SDFO CDO (m/f)		Coordinate with SDFO
Field				
2. Data collection				Observation sheet: assessment of forest and rangeland resources (Annexure-8)
2.1 Observations	SDFO	F, FG	Observation sheet GPS	
2.2 Informal Interviews	SDFO	F, FG	Checklist informal interviews Notepad	
Office				
3. Data analysis				Data analysis in jointly done with CDO (m/f)

3.1 Preparation of maps	SDFO	F, FG	Email exchange with field data with GIS lab PMU	Manual indicates type of maps
3.2 Preparation of tables	SDFO	CDO (m/f)	Tables in manual	
3.3 Make list of key issues and questions to be confirmed in community	SDFO/CDO (m/f)			Analysis may indicate missing information
3.4 Preparation for cross checking and sharing with community	SDFO/CDO (m/f)	F, FG, FFE	- Meeting formats for preparation and reporting - Making flipcharts of tables and maps for community meeting	Jointly done SDFO with CDO (m/f)
Field				
4. Sharing and cross-checking information with community	SDFO/CDO (m/f)	F, FG, FFE	Prepared flipcharts and maps	Some visits to specific forest and rangeland areas by SDFO may be necessary
Office				
5. Adjusting tables and maps	SDFO/CDO (m/f)	F, FG, FFE		If necessary, contact GIS lab
6. Organizing files and data	SDFO/ CDO (m/f)			Per PU Per Step
7. Reporting to DFO	SDFO	CDO (m/f)		

Objective

- Participatory rapid assessment of availability and condition of forest and rangeland resources
- Identification of potential project sites and a list of activities.

Results

- Maps of forest and rangeland resources: landcover map; past interventions map; land use map; land ownership and control map.
- Table of overview of existing forest and rangeland resources
- Table with condition, risks and potential of each vegetation type
- Table with calculation of use of mature plantations
- Table of use of forest resources established by the Forest Department

Activities

1. Preparation of for data collection
2. Data collection: participatory rapid assessment of forest and rangeland resources
3. Data analysis

4. Sharing and cross-checking with community
5. Organizing and filing data
6. Reporting to DFO

The activities will be explained below.

Office

1. Preparation

- SDFO acquires the GIS map with indicated boundaries of Planning Unit, including boundaries of existing GIS mapped forest resources, from PMU GIS-lab.
- SDFO collects all available enclosure and plantation journals for analysis during operational management planning from the Divisional Forest Department Office.
- The SDFO, Forester, Forest Guard analyze the GIS map. On the map they indicate different types of forest and rangeland resources, as well as plantations and enclosures. Indicate homogeneous vegetation zones and give them a number. The numbers will be used in the observation sheets. Possible land cover types are:
 - Agriculture (and mix urban) Land
 - Forest Land
 - Shrub and bush land
 - Rangeland
 - Alpine pastures
 - Barren land
 - Water bodies
- The SDFO, Forester, Forest Guard decide on locations to visit of each type of forest and rangeland resources. Make sure to cover all types including officially registered plantations and enclosures (including those that are not GIS mapped).
- Copy sheets for assessment (take some extra!) and a checklist for informal interviews. (See annex 8 and 9). Take a map on which you can make notes.
- Set date and time for field visits and communicate with VDC/WO or village elders in coordination with CDOs. Ask for some community members to join the field visit.

Field

2. Data collection

The SDFO, Forester and Forest Guard

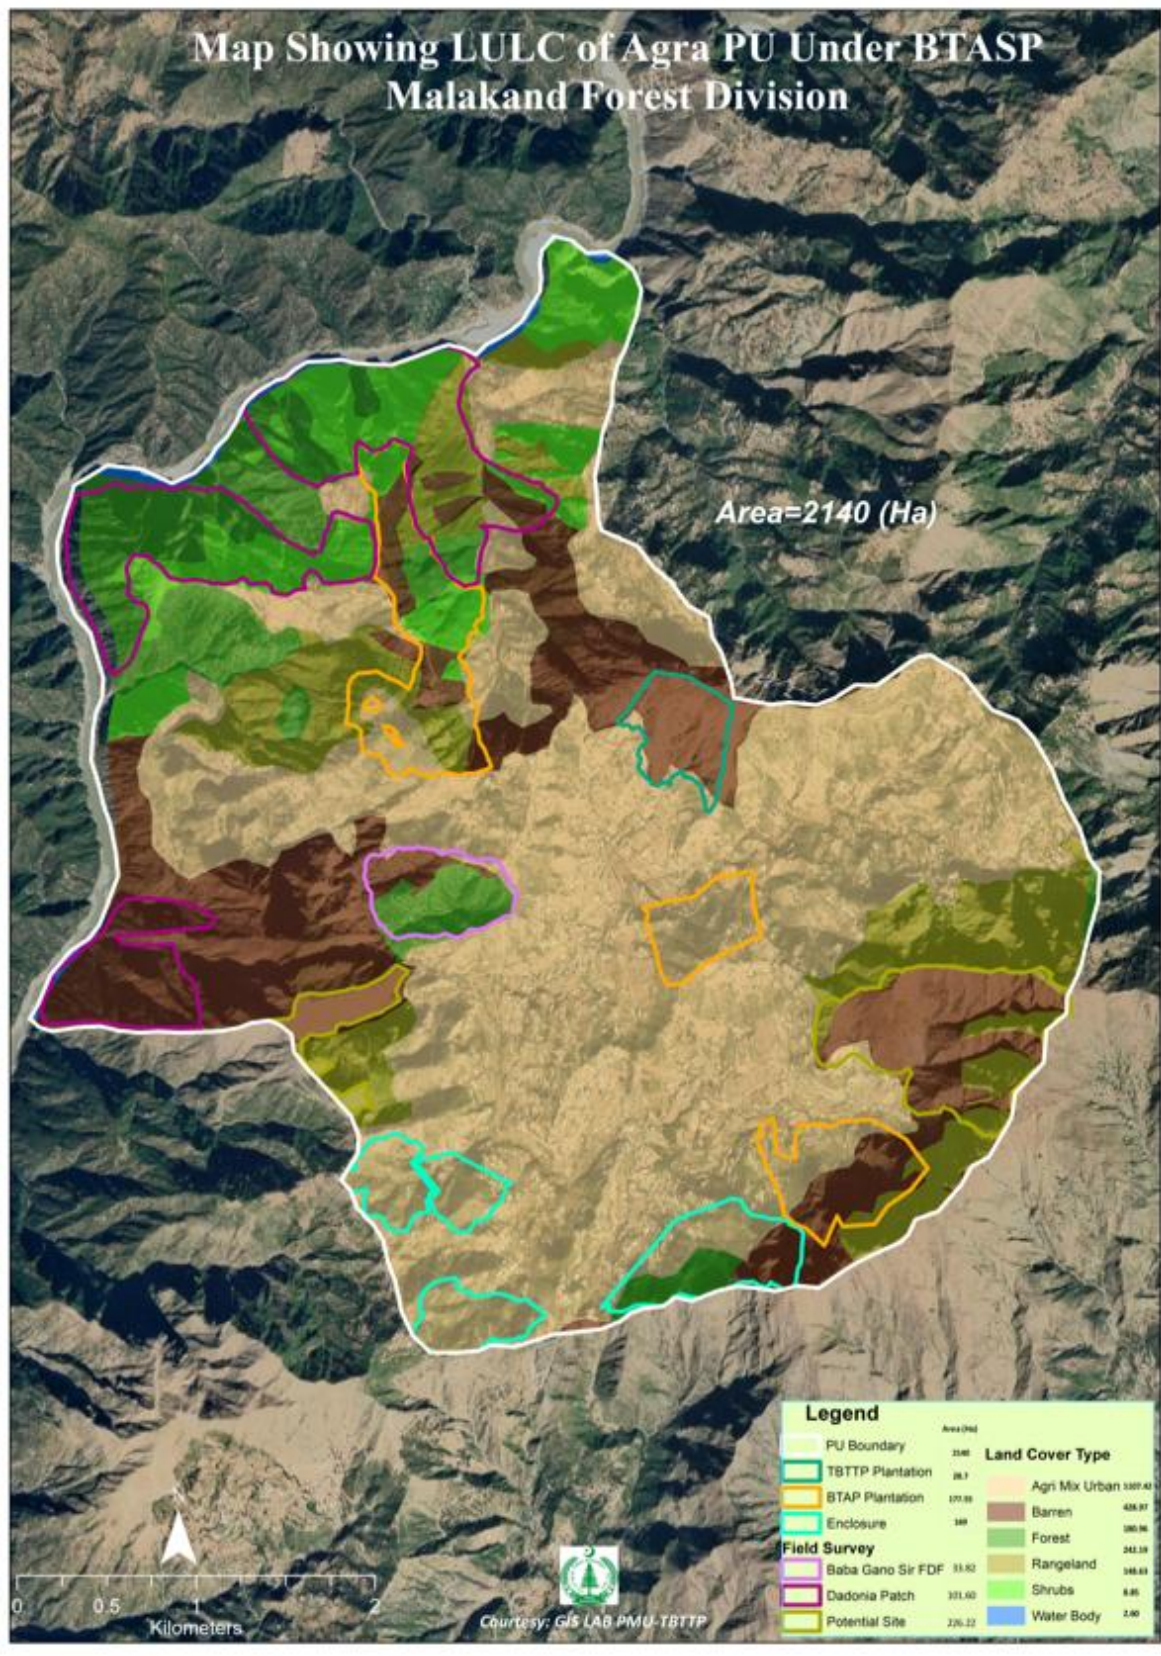

- Make field visits as indicated on the map with community members
- Take GPS-coordinates of each land cover type that is being visited, including those plantations or enclosures that are not mapped in the GIS-lab yet.
- Write observations on map and assessment sheets/tables (see annex 8)
- Have short interviews on key issues with community members that you may meet in the field (use the checklist of key issues). (see annex 9). Use the use following probes
 - What?
 - Who?
 - Why?
 - Where?

- When?
- How?

Note: easy to remember: 5xW and 1xH

Write down the answers of the informal interviews in a notepad.

Example of forest resource assessment map (below)

Office

3. Data analysis

The SDFO, Forester and Forest Guard analyze the data that they have collected during the field visit (see annex 10).

Note: *Data analysis will be combined with socio-economic analysis (see also step 3)*

- Maps and tables

Maps:

- Land cover map
- Map with existing interventions: BTAP/10BTTP and other old plantations/enclosures
- Land use map: timber/poles; fuelwood collection; grazing; grass cutting; NTFP collection; hunting; mining **(together with CDOs (m/f))**
- Map of land ownership, rights, control and use by sections **(together with CDOs (m/f))**
- Map with proposed management units see also step 4 **(together with CDOs (m/f))**
- Map with proposed interventions **(together with CDOs (m/f))**

Tables:

Forest and rangeland resources tables

- Tables with vegetation of land cover types, condition and potential
- Tables with existing plantations and enclosures, condition and potential
- Table with short description of changes in forest and rangeland area during the last 30 years **(together with CDOs (m/f))**

- Information per key issue

The SDFO organizes together with the CDOS (m/f) the information from the informal interviews according to the key issues listed in the checklist. This information may provide context to the interpretation of maps and tables.

Note: *The SDFO and CDO (m/f) analyze the causes for the existing condition of the vegetation. Causes for deforestation and land degradation may be a combination of natural and man-made factors:*

- *potential natural causes: fire; diseases/pests; floods/erosion; drought*
- *man-made causes: agricultural expansion; shifting cultivation/fires for agricultural cultivation; overgrazing; logging; overuse due to fuelwood collection; mining; dams; roads; social or land conflicts*

4. Sharing and cross-checking with community

Office

The planning team prepares a meeting with the VDC/WO and/or representatives of all community sections in planning unit. The objective of the community meeting is to share, cross-check and improve maps and tables. The planning team decides on which maps and tables to present and cross-check in a community meeting. Make list of key issues and questions to be confirmed in community.

For preparation and reporting on the community meeting use the formats in annex 2.

Note: *Agenda of community meeting includes sharing and cross-checking of socio-economic analysis*

Field

SDFO and CDO (M/f) present the maps and tables and cross-check the information. They will discuss contradictory information and fill the gaps. Special emphasis is given to drawing conclusion on use, ownership, and the condition of forest and rangeland resources.

Note: *One area might have multiple uses and one kind of use might be spread over more areas. Don't forget to ask 5xW and 1xH:*

- *What?*
- *Who?*
- *Why?*
- *Where?*
- *When?*
- *How?*

Office

After the meeting the planning team may update and finalize the tables and maps.

5. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, tables, formats for preparation of field meetings and formats on field reports will be stored in the same file.

6. Reporting to DFO

The planning team requests a meeting with the DFO and shares the results of step 2 of the planning process. The DFO checks the results and if deemed necessary requests additional actions to complete this step.

Step 3: Participatory socio-economic analysis and social organization

Note: step 2 and step 3 can be implemented simultaneously. The SDFO is in the lead for the participatory rapid assessment of forest and rangeland resources in step 2. The CDOs (m/f) are in the lead for the socio-economic analysis and social organization in step 3.

Step 3 consists of two main activities:

3a. Collecting and analysing socio-economic data on the planning unit; and

3b. Establishing or strengthening the Village Development Committee and Women Organization.

3a. Participatory socio-economic analysis

What	Who		How	Remarks/ tools
	Responsible	Support		
Step 3a: Socio-economic analysis				
Office				
1. Preparation for data collection				
1.1 Collect filled secondary data format, results of stakeholder analysis, community map, GIS map with locations of visit by SFDO	CDO (m/f)	FFE	- Filled secondary data sheet - Stakeholder analysis - Community map - GIS map with locations to be visited by SFDO	Annexure- 3 Annexure- 4 Annexure- 5
1.2 Analysis of data and maps, and identify locations for focus groups discussions	CDO (m/f)	FFE		Spread over PU area Share with SDFO
1.3 Copy of tables and checklist of informal interviews	CDO (m/f)	FFE	Tables in manual Checklist informal interviews	
1.4 Plan field visit with community	CDO (m/f)	FFE SDFO, F, FG	Meeting formats for preparation and reporting	Coordinate with SDFO
Field				
2. Data collection				
2.1 Focus group discussions	CDO (m/f)	FFE	Tables Checklist informal interviews Notepad	
2.2 Informal interviews	CDO (m/f)	FFE	Checklist informal interviews	

			Notepad	
Office				
3. Data analysis				Data analysis in jointly done with SDFO
3.1 Preparation of tables	CDO (m/f)	SDFO	Tables in manual	
3.2 Make list of key issues and questions to be confirmed in community	CDO (m/f)/ SDFO			Analysis may indicate missing information
3.3 Preparation for cross checking and sharing with community	CDO (m/f)/ SDFO	F, FG, FFE	- Meeting formats for preparation and reporting - Making flipcharts of tables and maps for community meeting	Jointly done with SDFO
Field				
4. Sharing and cross-checking information with community	CDO (m/f)/ SDFO	F, FG, FFE	Prepared flipcharts and maps	Some visits to specific forest and rangeland areas by SDFO may be necessary
Office				
5. Adjusting tables and maps	CDO (m/f) SDFO	F, FG, FFE		
6. Organizing files and data	CDO (m/f) SDFO			Per PU Per Step
7. Reporting to DFO	CDO (m/f)	SDFO		

Objectives

- Analysis of socio-economic situation of the Planning Unit, including analysis of ownership, use and control of forest and rangeland resources
- Assessment of the social economic setup, including social institutions and relationship among stakeholders related to natural resources within the potential project sites and proposed list of activities

Results

- Tables on socio-economic situation, and ownership, use and control of forest and rangelands

Activities

1. Preparation of for data collection
2. Data collection: participatory socio-economic analysis
3. Data analysis

4. Sharing and cross-checking with community
5. Organizing and filing data
6. Reporting to DFO

The activities will be explained below.

Office

1. Preparation of for data collection

- CDOs (m/f) collect the already filled secondary data format, the results of the stakeholder analysis and the community map
- CDOs (m/f) collect the GIS map with indicated vegetation zones prepared by the SDFO, if available. Otherwise use Community Map.
- The CDOs (m/f) and FFEs analyse the available data and decide which village sections to talk to and where to hold focus group discussions. Make sure to cover all major village sections, spread over the various hamlets in the Planning Unit.
- Copy tables for the focus group discussions (see annex 11). Make some extra copies! Also, include already the tables for social organization in annex 12.
- Make a checklist of key issues to be discussed or verified, take a map on which you can make notes (see annex 9).
- Fill out the format for the preparation of community meetings (see annex 2).
- Set date and time for focus group discussions and communicate with VDC/VO and representatives of community sections.

Field

2. Data collection: participatory socio-economic analysis

- CDOs and FFEs conduct focus group interviews with the identified community sections (both with male and female community members). Fill out data in tables and maps for each community section (see annex 11 and 12), in short:
 - Ownership, use and control tables
 - Activity profile
 - Dependency on forest and rangeland resources
 - Problem and solution tables (general community issues; forest and rangeland issues)
 - Social organization tables

Focus group interview

A focus group interview is a research technique in which a group of 5 to 10 people are answering questions through a joint discussion on the subject. A moderator is putting forward the the question and guiding the group discussion.

- Have short interviews with community members on key issues that you may meet in the meetings and on the road (use the checklist of key issues). (see annex 9). Use the following probes

- What?
- Who?
- Why?
- Where?
- When?
- How?

Note: easy to remember: 5xW and 1xH

Write down observations on key issues in notepad.

Office

3. Data analysis

The CDOs and FFEs analyse the data of each community section collected in the field. (see also annex 10)

- Information on key issues
The CDOs (m/f) organize together with the SDFO the information from the informal interviews according to the key issues listed in the checklist. This information may provide context to the interpretation of maps and tables.
- Maps and tables
The CDOs (m/f) prepare with the SDFO consolidated maps and tables. This means that they combine the data of the various community sections on one subject in one table or map.

Maps (**with SDFO in the lead**)

- Land use map: timber/poles; fuelwood collection; grazing; grass cutting; NTFP collection; hunting; mining
- Map of land ownership, rights, control and use by sections
- Map with proposed management units
- Map with proposed interventions

Tables (details see annex 10)

- Table with general village data
- Tables on ownership and control of forest and rangeland resources
- Tables on land use of forest and rangeland resources
- Table of activity profile
- Table with major sources of income and dependency on forest and rangeland resources
- Table with short description of changes in forest and rangeland area during the last 30 years (**together with SDFO**)
- Problem and solution tables (general community issues; forest and rangeland issues)

Analysis of data

Make sure to draw conclusions based on the data that you have collected regarding use, ownership and control of forest and rangeland resources. These conclusions should guide us in the preparation of management plans!

Do not only fill out data in the formats but ask yourself why this information is important!

Note: data analysis will be combined with participatory rapid assessment of forest and rangeland resources (step 2)

4. Sharing and cross-checking with community

Office

The CDOs (m/f) and SDFO prepare a meeting with the VDC/WO and/or representatives of all community sections in planning unit. The objective of the community meeting is to share, cross-check and improve maps and tables. The planning team decides on which maps and tables to present and cross-check in a community meeting, particularly.

- Vegetation map, including indication of plantation area
- Land use map
- Map of land ownership, control and use by sections
- Table of existing use of forest and rangeland resources by sections
- Table of legal and customary ownership and use rights on forest and rangeland resources
- Table of existing rules and regulations for use of the area
- Table with activity profile
- Table with major sources of income and dependency on forest and rangeland resources
- Short description of changes in forest and rangeland area during the last 30 years

To be prepared during the VDC and WO meeting

- Table with main community problems and possible solutions in the planning unit
- Table with main problems in forest and rangeland management (rights; use; control)
- Table with potential interventions regarding forest and rangeland (what; where)

For preparation and reporting on the community meeting use the formats in annex 2. After the meeting the planning team may update and finalize the tables and maps.

Note: agenda of community meeting includes sharing and cross-checking of rapid assessment of forest and rangeland resources

Field

SDFO and CDO (M/f) present the maps and tables and cross-check the information. They will discuss contradictory information and fill the gaps. Special emphasis is given to drawing conclusion on use, ownership, and the condition of forest and rangeland resources.

Note: *One area might have multiple uses, and one kind of use might be spread over more areas. Don't forget to ask 5xW and 1xH:*

- *What?*
- *Who?*
- *Why?*
- *Where?*
- *When?*
- *How?*

Office

After the meeting the planning team may update and finalize the tables and maps.

7. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, tables, formats for preparation of field meetings and formats on field reports will be stored in the same file.

8. Reporting to DFO

The planning team requests a meeting with the DFO and shares the results of step 2a of the planning process, i.e. 'participatory socio-economic analysis'. The DFO checks the results and if deemed necessary requests additional actions to complete this step.

3b. Social Organization

What	Who		How	Remarks
	Responsible	Support		
Step 3b: Social Organization				
Office				
1. Preparation for social organization				
1.1 Collection of information	CDO (m/f)	FFE	- VDC/VO Agreements - Minutes of VDC/VO meetings - Community Participation rules - Information steps 1 and 3a	
1.2 Analysis of existing information	CDO (m/f)	FFE, F, FG	Tables from manual	
1.3 Preparation of VDC/VO (community meetings)	CDO (m/f)	FFE	Meeting formats for preparation and reporting	
Field				
2. VDC/VO meeting	CDO (m/f)	FFE	Meeting format and tables	
3. Informal meetings with separate sections (if needed for strengthening VDC/VO)	CDO (m/f)	FFE		- For Strengthening or re-organizing VDC/VO - NOT same day as VDC/VO meeting
Office				
4. Analysis				
4.1 Analysis of VDC and VO (status and required capacity building for PFRMP)	CDO (m/f)	FFE	Tables from field visit Action list	Split out capacity building for step 4 and for steps 5 and 6
4.2 Preparation of VDC/VO meetings	CDO (m/f)	FFE	Meeting formats for preparation and reporting	
Field				

5. General body meeting(s) for organization, re-organization and strengthening VDC and WO	CDO (m/f)	FFE		
Office				
6. Sharing of information	CDO (m/f) and SDFO	FFE, F, FG		
7. VDC and WO registration office order by DFO	DFO	CDO (m/f), SDFO		
8. Organizing files and data	CDO (m/f)			Per PU Per Step
9. Reporting to DFO	CDO (m/f)	SDFO		

Objective

- Village Development Committee and Women Organization established or strengthened

Result

- Inclusive and registered Village Development Committee and Women Organization

Activity

1. Social Organization
2. Organizing and filing data
3. Reporting to DFO

This activity will be explained below.

1. Social Organization

Objectives

- Develop inclusive male and female VDC and WO for management of forest and rangeland resources
- Facilitate ability of the community to reach agreement on objectives for management of forest and rangeland resources, and contributions to management and distribution of benefits between all stakeholders (owners and users, men and women)
- Have a formally registered and recognized organization with transparent rules of business

How to do it?

Office

1. *Review and analyze data*

The CDOs (m/f) and FFEs will

- Take and discuss all information from secondary data collection, stakeholder analysis, community map, socio-economic analysis, tables on social organization in annex 12.

- Make an analysis for establishment or strengthening a Village Development Committee or Women Organization using the following tables:
 - Table of local government structure and activities
 - Table of community sections, place of residence and specifying ownership and/or use of the forests and rangelands resources
 - Table with existing social organizations
 - Table with analysis of social relationships between community sections

Note: *if not all information is available (e.g., on social relationships within or between community sections), you may need to consult the community!*

- Discuss:
 - Which community sections should be part of the VDC and WO
 - If an existing social organization can function as inclusive male and female VDC/WO
 - How representatives of these community sections will be selected for VDC and WO
 - How to deal with potential antagonistic relationships between community sections

Note: *Due to accessibility problems, it may not be possible to gather women from different sections and hamlets in one location. Depending on the local circumstances a practical solution the CDO (f) may come up with solutions in dialogue with the local community members. One option might be to work with sub-committees.*

Village Development Committee and Women Organization and Community Participation Rules (2004)

CPR (2004) give guidelines on the establishment and functioning of VDCs and Joint Forest Management Committees. CPR (2004) were drafted at a time that local governments were not functioning. It reflects guidelines related to the functioning of local government. Not all guidelines are very practical for the objectives of BTASP. For example, membership and election of committee members may not be based on percentage of the population or on a popular voting system. In case of BTASP the formation and functioning will be adjusted to the objectives of BTASP and local traditions and circumstances. The intention and spirit of the CPR (2004) are very valuable and will be adhered to.

- Prepare for a community meeting using the format in annex 2. There are two options either VDC/WO exist, or VDC/WO is absent.

In case a VDC and WO exist the CDOs (f/m) will check

- if their membership is inclusive,
- how the VDC or WO are functioning, and
- what is needed to strengthen the VDC and WO and build their capacity for PFRMP.

In case a VDC or WO are absent the CDOs (f/m) will develop a plan for establishment of a VDC and WO. Questions are:

- which sections should be member of the VDC and WO
- how to establish the VDC and WO
- what is needed to build the capacity of the VDC and WO for PFRMP.

Field

2. Meeting with representatives of all sections

According to the local situation one or more meetings with different sections may be organized. The content of the meeting will vary according to the presence or absence of a VDC or WO.

Option 1: Village Development Committee and Women Organization are present

Discuss with VDC and WO:

- Membership (use stakeholder analysis)
 - Which sections are member of VDC or WO, which sections are not a member?
 - Who is (vice-)chairman/woman, secretary, treasurer?
- Registration
 - Do VDC and WO have an official registration? With which department? What are stated objectives in registration?
 - Do VDC and WO have an agreement with the Forest Department? What is in the agreement? Check for copy with Forest Department.
- Rules and regulations
 - Do VDC and WO have official rules of business?
 - How often do they meet as committee? How often does the general body meet?
 - When were the last meetings of the VDC and WO, and the general bodies?
 - How do they set the agenda of a meeting?
 - Do VDC and WO have rules of presence/absence of attendance?
 - How do they make decisions, publicize and enforce decisions?
 - Does VDC enforce 'nagha'? Which areas? Which fines? Who will collect?
 - How do they resolve conflicts?
- Record keeping
 - Do VDC and WO keep minutes of meeting?
- Finance
 - Do VDC and WO have a bank account?
 - Do VDC and WO have an income? From which sources?
 - Do VDC and WO spend money? On what activities?

Actions

1. Discuss these questions with the VDC and WO
2. Re-organize VDC and WO before making an overall PFRMP
3. Discuss with VDC/WO how you can strengthen the VDC and WO and organize training sessions to make sure that
 - All sections will be represented in the VDC or WO
 - Rules of business are updated (including record keeping and decision making

- VDC or WO will get registration
- A bank account is arranged, and financial procedures are developed

Option 2: No Village Development Committee or Women Organization present

Actions

1. Based on the analysis of stakeholders and social relationships decide which community sections should be member of VDC or WO for the purpose of management of forest and rangeland resources.
2. Contact influential members of each section (male and female): discuss purpose of VDC and WO, i.e., (a) management of forest and rangeland resources, (b) getting agreement with all owner and user sections on distribution on rights, obligations and benefits, (c) transparent organization, and (d) selection of member of the community section who should become representative in the VDC and WO.
3. Organize meeting of section for the selection of representative in VDC or WO.
4. Organize training sessions with VDC or WO on organization and rules of business (see option 1 above) and preparation of PFRMP.

Capacity of VDC and WO

In most cases VDC and WO are new or not mature organizations yet. The capacity of the VDC/WO members to run an organization and to manage forest and rangeland interventions will need to be built. Capacity building of VDC and WO will be part of the PFRMP intervention package. On the other hand, the VDC and WO will need to meet some basic criteria to develop and implement management plans for forest and rangeland resources. In the phase of preparation of the overall PFRMP and the management plans (step 5) CDO (m/f) will strengthen the capacity of the VDC and WO in a number of training sessions to meet the basic criteria. The basic criteria include:

- governing body: chairman/woman; vice-chairman/woman; secretary; treasurer
- record keeping
- agreed upon decision making process
- agreed upon bank account and financial procedures

Note: the bank account of an individual board member can be used as long as all VDC/WO members agree upon transparency and financial rules.

In the workplan time needs to be allocated to building these capacities.

Office

After the meeting the planning team may update and finalize the tables and maps. The CDOs (m/f) report to DFO and request DFO to register the VDC and WO through an office order.

2. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, tables, formats for preparation of field meetings and formats on field reports will be stored in the same file.

3. Reporting to DFO

The planning team requests a meeting with the DFO and shares the results of step 2b of the planning process, i.e. 'participatory socio-economic analysis'. The DFO checks the results and if deemed necessary requests additional actions to complete this step.

Step 4: Drafting of overall Participatory Forest Resource Management Plan (zoning plan) and ESMF Risk Mitigation Plan

Office				
17. Organizing files and data	CDO (m/f) SDFO			Per PU Per Step

Objective

- Management units and interventions in the Planning Unit defined through combining data from the analysis of the forest and rangeland resources and socio-economic analysis
- Overall Participatory Forest Resource Management Plan (zoning plan) prepared
- Environmental and social safeguards risk screening conducted, and Draft Environmental & Social Risk Mitigation Plan prepared.
- Summary of Risk Mitigation Plan discussed with VDCs and WO for FPIC approval.

Results

- Overall Participatory Forest Resource Management Plan (zoning plan) with management units prepared.
- Risk Mitigation Plan for each intervention prepared and consent obtained from VDC and WO.

Activities

1. Analysis of field data for identification of management units (zoning) and interventions
2. Meeting DFO on proposed management units (zoning) and interventions
3. Risk screening of each intervention against all the ESS standards and propose mitigation measures
4. Compiling maps and tables for PFRMP
5. Preparing draft criteria for selection of intervention sites and beneficiaries
6. Discuss proposed division of planning unit in management units, criteria for potential intervention sites and beneficiaries with VDC and WO
7. Sharing summary of ESMF Risk Mitigation plan for each intervention with VDC and WOs and obtain their consent (FPIC Approval)
8. Prepare an overall Participatory Forest Resource Management Plan
9. Approval and signing of overall Participatory Forest Resource Management Plan
10. Organizing files and data

These activities will be explained below.

Office

1. Analysis of field data for identification of management units (zoning) and interventions

The planning team analyses the forest and rangeland resources map and the ownership, use and control map to decide on potential division of the planning unit in different management units. A management unit is an area that is exclusively owned and/or used by specific community sections. Community sections that have no interests in an area, that means have no ownership, concessionary rights or are not using an area are not part of the committee that will develop an operational management plan for that area (step 5).

What is a Management Unit?

A management unit is a geographically defined area determined by land cover types and ownership and use boundaries. The use of the vegetation zones by clearly defined community sections (owners; tenants; Gujars) is not interacting or interdependent with the use of other areas by other community sections.

A planning unit can have one or more management units. A management unit can be the whole planning unit in case the use (management) of all vegetation areas is interdependent, i.e., the use of one area is affecting the use of another. For example, the grazing of an area is affecting a forestry site.

A management unit is **NOT** a plantation site. It involves an area with different land uses, owned and used by clearly defined sections.

Technically management units are defined by overlaying different maps:

- a) First layer: land cover map with vegetation zones
- b) Second layer: put on existing land use on vegetation map
- c) Third layer: put areas of use and ownership of various stakeholders (sections) on vegetation/land use map

Next, the planning team analyses the interdependency or interaction of use between different areas by different community sections. If you can demarcate areas for which management plans can be prepared excluding community sections that have nothing to do with the area because they are not using or owning the area, we consider these a management unit.

Based on the analysis of condition, risks, actual and potential uses of the forest and rangeland resources (step 2) , as well as the socio-economic analysis the SDFO and CDO (m/f) (step 3) identify management objectives of an area and potential interventions that may be discussed with the VDC/VO. Interventions include technical interventions as well as capacity building of VDC and VO, and management committees (see table).

Table: Menu of potential interventions of BTASP

Note: based on local situation and analysis interventions may be added to the PFRMP (reasons for inclusion of additional interventions should be provided in the PFRMP)

Intervention	Conditions	Specifications
1. Forest Resource Management		
1.1 Update plantation and enclosure management plans	10% of income of areas will be deposited in a VDC account for natural resource management	Income from grasses, bushes, trees
1.2 Protect and encourage natural regeneration (existing enclosures)	Payment of watchmen for 2 years, afterwards paid out of VDC NRM fund (1 watchman/ 40 hectares)	
1.3 Enrichment planting in existing plantations	Provision of native Plants and labour cost of plantation	- Old BTAP and 10 BTTP plantation - Existing survival rate is 50 % or less - Willingness of planting native species
1.4 Thinning old plantations	10% of income of areas will be deposited in a VDC account for natural resource management	Income from grasses, bushes, trees
1.5 Block plantation on barren land	- Up to 100 has for a PU. - Payment of watchmen for 2 years, afterwards paid out of VDC NRM fund (1 watchman/ 40 hectares) 10% of income of areas will be deposited in a VDC account for natural resource management	- Location on waste and barren land - Several units with individual land ownership not exceeding 5 ha - No major disputes of area - Willingness for contribution by landowners/users in watch and ward - Signed resolution by VDC/WO - Income from grasses, bushes, trees
1.6 Establishment of fuelwood lots	- Near hamlets - Planting stock and planting cost (earthwork) will be provided - Protection responsibility of owners	- Availability of area up to 0.1-2 ha area - At least 2 families benefit - Preference for women headed households - Families with low socio-economic status

		Willingness to plan multipurpose fast growing tree species
Establishment of fire lines	Cleaning of 10 feet wide fire line. Max 5 km	In existing BTAP and TBTP plantations and Chir enclosures
2. Rangeland Management		
2.1 Controlled grazing	Training of VDC and local herdsmen	Households with livestock using hillsides
2.2 Provide fodder seeds on agricultural and marginal lands	- Provision on test basis only 100 kg/year for 5 years	- Households with livestock using hillsides - Households with land available for cultivation of fodder
2.3 Spring protection	Biological measures only	Close planting (5x5 feet) up to 5 ha in total for all protection measures
3. Livelihood activities		
3.1 Distribution of tree seedlings (farm forestry)	5,000 -10,000 tree seedlings/year for 4 years	- Preference households who do not benefit from block plantations and fuel woodlots 50% of the seedlings distributed through the WO - Up to 100 plants per beneficiary
3.2 Management of NTFP	Training on pre- and post-harvest of local NTFPs	- Households collecting NTFPs - Recommendation VDC/WO
3.3 Women tree nursery	- Nursery of 25,000 plants - Maximum of 5 nurseries	- Woman willing to work in nursery - Availability of at least up to 250 SF area - Accessibility of site through road - Availability of water source near the location - Willingness to participate in nursery raising training - Bank account holder or willing to open the bank account - Recommendation VDC/WO

4. Capacity Building		
4.1 Training VDC, WO and Management Committees	• Training on running VDC and WO as well as technical training	• Precondition for providing funds to VDC/WO

2. Meeting DFO on proposed management units (zoning) and interventions

SDFO and CDO (m/f) present and discuss the proposed management units and interventions with DFO. They discuss the division of labour for the preparation of the PFRMP using the table of contents (see annex 13).

3. ESMF Risk Screening of each intervention.

Special attention will be paid to the risk analysis and the inclusion of mitigating measures, if any (see annex 17). Risk analysis is part of the environmental and social risk management framework of BTASP. SDFO and CDO (m/f) analyse each proposed intervention if they have potential environmental risks (negative effects on the environment) or social risks (negative effects for specific community sections or individual members). If any risks are identified, SDFO and CDO (m/f) propose mitigating measures. The mitigating measures will be discussed with DFO and VDC/WO, and, if agreed upon, be part of the PFRMP interventions and PFRMP report.

Once a list of activities has been identified, the next step is to conduct a 'risk screening' of each activity against all the ESS standards and propose mitigation strategies using the template in annex 17. Please note that each activity in each project site must be screened separately. All risks and mitigation measures must be then compiled into the 'Summary' table, along with timelines, budget, and focal points that shall be responsible for the implementation of the mitigation measures. This summary shall also act as 'Indicators' for the purposes of monitoring compliance against the same.

Note:

Teams will also refer to the list of general risks and mitigation to see if any of risks identified have pre-existing mitigation measures.

To obtain FPIC consent, the PFRMP team must compile all the risks and proposed mitigation strategies into the FPIC form (See annex 18) and present the same to the VDC, WO and management committee. This needs to be presented in such a way that the local communities can fully understand the risks that will be associated with the implementation of the activity. A session must be conducted with each community and /or stakeholder group for their feedback. If the community does not agree that the proposed mitigation will sufficiently mitigate the risks, they have the right to reject, amend, revise or propose another mitigation activity.

Upon rejection by the community, the planning team may not proceed to the next phase unless the activity is revised by the planning team in the light of the communities' feedback, or readjusted, and if subsequently approved by the community.

The community will also be requested to help identify exact sites and beneficiaries for the project activity, and in the distribution of project benefits. To assist the CBOs in the selection of project beneficiaries, the planning team must develop a 'selection criteria' on the basis of which project benefits will be distributed and dispersed.

If the community is satisfied, the planning team and the VDC, WO and Management committee shall enter into an agreement and have the FPIC consent form signed (see annex 14 and 18). The FPIC approval and consent form shall be annex to the agreement.

4. Compiling maps and tables for PFRMP

SDFO and CDO (m/f) compile all maps and tables for the PFRMP. Make sure that conclusions are drawn on

- a) risks and potentials of different vegetation zones (forest and rangeland resources)
- b) ownership, concessionary and use rights
- c) use of different areas

5. Preparing draft criteria for selection of intervention sites and beneficiaries

Based on the general menu of interventions and the identified interventions prepare draft criteria for site selection and selection of beneficiaries (membership of management committees!) for discussion with the VDC and WO. (See also above under activity 3).

Prepare for a community meeting using the format in annex 2.

Field

6. Discuss proposed management units, criteria for potential intervention sites and beneficiaries, and risk assessment with VDC and WO

SDFO and CDO (m/f) supported by Forester, Forest Guard and Female Forest Extensionist discuss and agree with VDC and WO on management units, potential interventions, location for interventions and selection of beneficiaries for the interventions. The planning team cross-checks if its assumptions on exclusive ownership rights and use of the proposed management units is correct, or if the boundaries of the management units need to be adjusted. They also discuss the risk assessment (using annex 17), and the proposed mitigating measures. The decisions are documented and filed in the signed minutes of the meeting of the VDC and WO.

Office

7. Prepare an overall Participatory Forest Resource Management Plan

SDFO and CDO (m/f) prepare the overall PFRMP based on the decisions of the VDC and WO. It also includes the Risk Mitigation Plan.

The Purpose of an overall PFRMP is

- a) To consolidate basic information on the planning unit regarding socio-economic composition, availability and condition of forest and rangeland resources, as well as ownership, concessionary rights and use of the forest and rangeland area

b) To identify management units (zones) and potential management options (interventions) for operational planning agreed upon by the VDC and WO

8. Approval and signing of overall Participatory Forest Resource Management Plan

The approval will be done in various steps.

Step 1: Approval and adjustment by DFO

DFO is responsible for the contents of the PFRMP. He will check and ask for adjustments to SDFO and CDO (m/f).

Step2: Presentation to Conservator of Forests

CF is the authorizing entity of the PFRMP. He should be aware of the activities in his jurisdiction. The draft PFRMP is presented and based on the comments of CF adjustments can be made (if agreed upon with the VDC and WO).

Step 3: Check by PMU and PIC of BTASP

PMU and PIC will check the quality of the draft PFRMP and the budget. They may ask the DFO to make some adjustments if necessary (and if agreed upon with the VDC and WO). The budget approved by the PIC will be a budget ceiling for all interventions in the Planning Unit. Changes in the budget must be properly documented and discussed and approved by the PIC before implementation of activities.

Step 4: Check by ESMF Focal Point.

The ESMF focal point will check the PFRM Risk Mitigation Plan to see whether the ESMF compliance is ensured as per ESS risk screening standards. He/she will suggest improvement if any.

Step 5: Preparation of VDC/WO agreement

DFO prepares a VDC/WO agreement in Urdu and English (see specimen annex 14). PFRMP will be part of the agreement. The agreement will also have clauses on Free, Prior and Informed Consent and on a complaint and redressal mechanism.

Step 6: Approval by Conservator of Forests

DFO will submit the PFRMP for approval by the CF. After approval the PFRMP the DFO will order the translation of the PFRMP in Urdu.

Step 7: Preparation for signing ceremony

CDO (m/f) and SDFO will prepare for a signing ceremony together with VDC and WO. They prepare for a community meeting using the format in annex 2.

Field

9. Signing ceremony

An official signing ceremony with the DFO as chief guest will be held in the planning unit. VDC and WO members and DFO will sign the agreement.

Office

10. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, tables, formats for preparation of field meetings and formats on field reports will be stored in the same file.

Step 5: Drafting of Management Plans for each Management Unit (technical plan)

Objectives

- Detailed technical interventions per Management Unit identified and elaborated in a Management Plan
- Management Committee per Management Unit established

Results

- Management Plans per Management Unit including operational plans per intervention
- Management Plan Agreement signed with VDC/WO as well as contracts between VDC/WO and Management Committee per Management Unit
- Form on Free, Prior, Informed Consent as part of the Management Plan Agreement signed

Activities

1. Planning for preparation of management plans and elaboration of operational plans for each intervention
2. Detailed data collection (inventory) for each intervention
3. Share data with GIS lab for elaboration of detailed maps
4. Elaborate 1st draft operational plan per intervention
5. Prepare for VDC/WO meeting and meetings with potential beneficiaries
6. General meeting of VDC/WO and potential beneficiaries on operational plans
7. Meeting with beneficiaries (owners; users) to form a Management Committee
8. Elaborate 2nd draft operational plan per intervention
9. Preparation of draft Management Plan Agreement and Contracts between VDC and Management Committee(s)
10. Discussion with VDC/WO and Management Committee(s) on plans, agreements and the Grievance Redressal Mechanism (GRM) for feedback, suggestion and complaints
11. Share draft Management Plan and Agreements with PMU and PIC
12. Finalizing Management Plan, Management Agreement and VDC-MC Contracts
13. Preparation for signing ceremony
14. Signing ceremony
15. Organizing and filing data

These activities will be explained below.

Office

1. Planning for preparation of management plans and elaboration of operational plans for each intervention

For each Management Unit a management plan will be prepared. A management plan will consist of operational plans for each intervention in a management unit.

Management Plans and Operational Plans

For each Management Unit a management plan will be prepared. For sustainable management of the forest and rangeland resources in a specific Management Unit several interventions may be needed (for example: block plantation; controlled grazing; enrichment planting...). For each intervention an operational plan needs to be elaborated. The management committee of the management unit will be responsible for all technical interventions in its area of control.

DFO requests SDFO and CDO (m/f) to plan for the elaboration of operational plans for each intervention in the Management Unit and the organization of a Management Committee in the Management Unit. SDFO will check if data for operational planning of each intervention are already available, or additional data collection is needed. CDO (m/f) check if they have a clear picture of owners, right holders and users of the Management Unit and potential beneficiaries, or community members potentially negatively affected by the interventions. CDO (m/f) identify those community members that they will need to involve in the elaboration and implementation of the operational plans.

Field

2. Detailed data collection (inventory) for each intervention

SDFO, Forester and Forest Guard collect additional information for each intervention. The information is intervention and location specific. Basically, it concerns information on:

- exact boundaries or location of the intervention (GPS coordinates)
- specifications needed for the implementation of an intervention (e.g., size of an area; number and type of seedlings needed; number of watchmen needed; number of livestock in a grazing area)
- environmental risks

CDO (m/f) and FFE visit the homesteads/hamlets close to the intervention areas. They find out who are the potential beneficiaries or potentially affected community members based on the actual and intended use of an area. They also may discuss potential mitigating measures with potentially affected community members.

Office

3. Share data with GIS lab for elaboration of detailed maps

SDFO will share the GPS coordinates of each intervention area, if not done in step 3 yet, with the GIS lab of the 10BTTP secretariat by email and request detailed maps of the intervention areas.

4. Elaborate 1st draft operational plan per intervention

SDFO and CDO (m/f) will share their information on each intervention and prepare a detailed operational plan for each intervention. The operational plan will specify:

- Beneficiaries
- Activities
- Quantities
- Costs
- Responsibilities (including project and community contributions)
- Planning

SDFO and CDO (m/f) also make a detailed analysis of environmental and social risks of each intervention. If required, SDFO and CDO (m/f) will include proposed mitigating measures in the proposed intervention or as additional intervention.

5. Prepare for VDC/WO meeting and meetings with potential beneficiaries

SDFO and CDO (m/f) prepare VDC/WO meeting and meetings with potential beneficiaries of each intervention to discuss the draft operational plans, using the formats in annex 2. Special attention will be given to the risk analysis and the proposed mitigating measures.

Field

6. General meeting of VDC/WO and potential beneficiaries on operational plans

CDO (m/f) and SDFO, supported by Forester, Forest Guard and FFE have a VDC/WO meeting to discuss the overall operational plans, the expected community contributions and risk analysis and potential mitigating measures. They will also explain that they will organize management committees of beneficiaries for a management unit. The VDC/WO is to make contractual arrangements with the management committee. BTASP support funds will be channelled to the bank account of the VDC. The VDC will be responsible to transfer funds to the management committees, according to the operational plan. In case after implementation the management committees generate fund (e.g., from grasses; shrubs; trees), benefits are distributed according to an agreed upon schedule. This includes a contribution of 10% to a natural resource fund of the VDC.

Potential beneficiaries are invited to the VDC/WO meeting. In this way they are aware of the role of the VDC/WO, as well as what is expected from them regarding the intervention.

7. Meeting with beneficiaries (owners; users) to form a Management Committee
CDO (m/f) and SDFO, supported by Forester, Forest Guard and FFE have a number of meetings with pertinent owners, right holders and users of the Management Units, to

- organize a management committee.
- discuss the operational plans of each intervention.
- agree upon own contributions and distribution of benefits between owners, right holders and users.
- discuss the contractual arrangement between the VDC/VO and the Management Committee (such as flow of funds; own contribution; contribution to natural resource management fund of VDC/VO; monitoring of activities by VDC/VO; conflict resolution by VDC/VO).

Office

8. Elaborate 2nd draft operational plan per intervention

SDFO and CDO (m/f) prepare a second draft of the operational plan for each intervention as part of a general Management Plan, based on the results of the field discussions with the VDC/VO and beneficiaries.

9. Preparation of draft Management Plan Agreement and Contracts between VDC and Management Committee(s)

SDFO and CDO (m/f) prepare draft Management Plan Agreement and Contracts between VDC and Management Committees. A capacity building plan will be part of the Management Plan Agreement. The SDFO and CDO (m/f) prepare for meetings with the VDC/VO and Management Committee(s) using the formats in annex 2.

Field

10. Discussion with VDC/VO and Management Committee(s)

SDFO and CDO (m/f) supported by Forester, Forest Guard and FFE, discuss with VDC/VO and Management Committee(s):

- Management Plan (including operational plans for each intervention)
- Management Plan Agreement between Forest Department and VDC/VO
- Contract(s) between VDC/VO and Management Committee(s)
- Grievance Redressal Mechanism (GRM) for feedback, suggestion and complaints.

Office

11. Share draft Management Plan and Agreements with PMU and PIC

In the office any adjustment of the Management Plan and Agreements will be made based on the discussions with the VDC and the Management Committees. Next, after checking the DFO will share the draft Management Plan and the Agreements with the PMU and PIC for quality control and check on budget. PMU and PIC may suggest some adjustments.

12. Finalizing Management Plan, Management Agreement and VDC-MC Contracts

After endorsement by PMU and PIC the SDFO and CDO (m/f) will finalize the Management Plan and agreements between FD and VDC/VO, and VDC/VO and Management Committee(s). DFO will order the translation of the documents in Urdu.

13. Preparation for signing ceremony

CDO (m/f) and SDFO will prepare for a signing ceremony of the Management Plan Agreement between FD and VDC/VO, and Contracts between VDC/VO and Management Committee(s). They prepare for a community meeting using the format in annex 2.

Field

14. Signing ceremony

An official signing ceremony with the DFO as chief guest will be held in the planning unit. VDC and VO members and DFO will sign the Management Plan Agreement. VDC and VO members and Management Committee Members will sign the VDC/VO-MC contracts. The Management Plan and signed agreements will be integral part of the PFRMP.

Office

11. Organizing and filing data

The planning team organizes all information collected in the planning unit, both soft and hard copies. All maps, tables, formats for preparation of field meetings and formats on field reports will be stored in the same file. The Management Plan, the Management Plan Agreement and the VDC/VO-MC contracts will be part 2 of the PFRMP.

Step 6: Implementation and Monitoring of PFRMP and Operational Management Plans for each Management Unit

Step 6 consists of two main activities:

6a. Implementation of the PFRMP with its Operational Management Plans; and

6b. Participatory Monitoring of the PFRMP with its Operational Management Plans.

6a. Implementation of the PFRMP with its Operational Management Plans

What	Who		How	Remarks
	Responsible	Support		
Step 6a: Implementation of Management Plans				
Office				
1. Preparation for implementation				
1.1 Requesting budget from PMU (PIC)	DFO		Budget request form	
1.2 Organizing logistics according to operational plan	SDFO CDO (m/f)	F, FG	Management Plan	
1.3 Preparation for organizing community contributions	CDO (m/f)	SDFO FFE F, FG	- Management Plan - Meeting formats for preparation and reporting	
Field				
2. Mobilization of VDC/VO and Management Committee	CDO (m/f)	FFE	Management Plan	
3. Arrangement of VDC/VO bank account	CDO (m/f)	SDFO DFO		
Office				
4. Transfer of budget to VDC/VO as per Operational Plan	DFO	SDFO CDO (m/f)		
Field				
5. Implementation of interventions	SDFO or CDO (m/f)	F, FG FFE		

Office				
6. Organizing files and data	CDO (m/f) SDFO			Per Management Unit and intervention

Objective

- Participatory development and implementation of annual plans of operations for each intervention in a Management Unit, including contributions of community and Forest Department
- Implementation and monitoring of Environmental & Social Risk Mitigation Plan

Results

- Annual Plans of Operation for each Management Unit
- Implemented activities according to annual plans and mitigation measures according to Environmental & Social Risk Mitigation Plans

Activities

1. Preparation for implementation
2. Mobilization of VDC/WO and Management Committee
3. Arrangement of VDC/WO bank account
4. Transfer of budget to VDC/WO
5. Implementation of interventions and mitigation measures
6. Organizing files and data

These activities will be explained below.

Office

1. Preparation for implementation

The operational plan per intervention forms the basis for the preparation for implementation of activities for each intervention. The operational plans are 'rolling plans', this means that they are annually updated according to progress in the field.

Budget requests

The overall budget for the approved intervention in PFRMP will be mentioned in the plan with detail breakup and unit cost. The DFO will submit the four monthly forecast to PMU/PIC and will requests the month budget from the PMU/PIC for the implementation of the planned interventions according to the Management Plan, and performance in the field. This implies that achieving performance standards (e.g., survival rates) will be conditional for (part of the) budget release. The DFO will use a budget request form both for 4 monthly forecast and one month budget request. (see annex 15)

Organizing logistics

SDFO and CDO (m/f) make all necessary logistic preparations for the implementation of interventions. This may include the acquisition of seedlings and other materials, and transport, depending on the type of interventions.

Preparation for community contributions

CDO (m/f) and SDFO discuss the community contributions that are needed to implement activities and that are agreed upon in the management plans. CDO (m/f) prepares meetings with the VDC/VO and Management Committee(s) to discuss the planning and implementation of activities and the expected community contributions. See annex 2.

Field

2. Mobilization of VDC/VO and Management Committee

CDO (m/f) supported by FFE discuss with VDC/VO and Management Committee on the planning and arrangements for implementation of interventions and the organization of the expected community contributions.

3. Arrangement of VDC/VO bank account

CDO (m/f) make clear financial rules with the VDC on:

- The bank account to be used
- The way income and expenditure are being recorded in an accounting ledger book (from FD to VDC; and between VDC to MC (management committee)).
- The creation of a Natural Resource Management Fund
- The way VDC/VO check the financial flows (e.g., the establishment of a 'finance and audit committee' under the VDC)

The financial rules are being recorded in minutes of meeting and signed by all VDC members.

Office

4. Transfer of budget to VDC/VO

DFO transfers those funds related to the interventions that pertain to the VDC/VO to the bank account of the VDC as agreed upon in the plan of operations of the PFRMP interventions. For example, those may be funds related to the payment of watchmen.

Field

5. Implementation of interventions and risk mitigation measures

SDFO, CDO (m/f), Forester, Forest Guard and FFE support the implementation of interventions as specified in the detailed annual plan of operations of the Management Plan.

Office

6. Organizing files and data

The planning team organizes all information collected in the planning unit, both soft and hard copies. Formats for preparation of field meetings and formats on field reports will be stored in the same file. These includes a copy of the signed minutes of meeting on finance.

6b. Participatory Monitoring of the PFMRP with its Operational Management Plans

What	Who		How	Remarks
	Responsible	Support		
Step 6b: Monitoring of Management Plans				
Office				
1. Preparation for participatory monitoring	CDO (m/f) SDFO	FFE F, FG	- Format for participatory monitoring - MACP Format for risk assessment and mitigation measures - Meeting formats for preparation and reporting	
Field				
2. Preparation of VDC/VO and MC for participatory monitoring	CDO (m/f) SDFO	FFE F, FG		
3. Monitoring of interventions and ESMF mitigation measures with VDC/VO (bank accounts; activities)	CDO (m/f) SDFO	FFE F, FG	- Format	Tool-iv. Monitoring and evaluation and corrective action Plan
Office				
4. Analysis of progress of Management Plan	CDO (m/f) SDFO		- Format	
5. Reporting to community	CDO (m/f) SDFO		- Format	
6. Reporting to PMU/PIC	DFO	CDO (m/f) SDFO		
7. Organizing files and data	CDO (m/f) SDFO			Per Management Unit and intervention

Objective

- Participatory monitoring of PFRMP and Management Plans, and Risk Mitigation Plan

Results

- Monitoring reports for PFRMP and each Management Unit

- Monitoring and corrective action plan report of ESMF mitigation measures

Activities

1. Preparation for participatory monitoring
2. Preparation of VDC/WO and MC for participatory monitoring
3. Participatory monitoring of interventions and risk mitigation measures
4. Analysis of progress of Management Plan
5. Reporting to community
6. Reporting to PMU/PIC
7. Organizing files and data

These activities will be explained below.

Office

1. Preparation for participatory monitoring

CDO (m/f) and SDFO prepare for participatory monitoring. Using the formats for the preparation of community meetings they decide on the agenda and the way to address the agenda items (see annex 2) and for the framework of participatory monitoring (see annex 16) as well as monitoring of ESMF Risk Mitigation Plan (see Annex-19)

Participatory Monitoring

Participatory Monitoring is the systematic recording and periodic analysis of information that has been chosen and recorded by insiders with the help of outsiders (definition FAO). In PFRMP the insiders are the VDC/WO and Management Committee, the outsiders are the Forest Department staff. Participatory Monitoring provides information on progress and the quality of the interventions, both to the community and the Forest Department. In case progress or quality are not as intended, stakeholders can make adjustments in implementation of interventions.

The following steps need to be addressed with the VDC/WO and Management Committee(s) (see also:

<https://www.fao.org/4/x5307e/x5307e05.htm#chapter%20four:%20participatory%20monitoring>)

Step 1: Discuss reasons for participatory monitoring

Reasons include:

- provides information on quantitative progress and quality of interventions, as well possible problems, to community (VDC/WO/MC and other community members) and to Forest Department
- provides community (VDC/WO/MC and other community members) and Forest Department (PMU/PIC) insight in use of resources and basis for allocating funds (subsidies)
- provides opportunity to adjust activities to increase (more) impact

Step 2: Review objectives and activities

Participatory monitoring will be done for all interventions in the Management Plan.

Discussion on the objectives and activities provides information if all stakeholders have the same starting point in implementing and judging the progress of the interventions.

Step 3: Develop monitoring questions

The outcome of step 2 (objectives and activities) helps to develop monitoring questions for each intervention. Make sure to limit yourself to key questions: what do we want to know?

For example:

- what are the number seedlings/size of area planted?
- which community members provided labour to the planting of the area?
- how much money was spent on planting?
- what income was generated?
- how were benefits distributed? Who received benefits in cash or kind?

Rank questions in order of importance in case many questions are suggested.

Step 4: Establish indicators

For each question determine indicators, that are pieces of information that help us to answer the question. It might take some time to establish indicators. They can be direct indicators (number of seedlings planted) or indirect indicators (estimated area and planting distance to calculate number of seedlings planted). Some questions may be answered by counting, some by a story/interview or picture.

Step 5: Decide which information gathering tools are needed

Determine for each indicator or question how you will gather information. For example:

- VDC/ WO records
- observation in the field
- group interview

One tool can be used to gather information for more questions.

Step 6: Decide who will do the monitoring

The monitoring will be done jointly by the VDC/WO (and depending on the intervention the Management Committee) and Forest Department staff (SDFO and CDO (m/f)). It will be decided who will be the appropriate person for a specific information gathering task.

Step 7: Analyse and present the results

The monitoring team will analyse together the results of the information collected and answer the monitoring questions. They also decide on how to present the results to the community and the Forest Department. For example, in a meeting with showing the questions and answers through making tables or charts.

Step 8: Take corrective actions if needed

Based on the results of the monitoring and the discussion of the results, the VDC/WO, Management Committee (MC) or Forest Department will take corrective actions to improve on the implementation of interventions.

Field

2. Preparation of VDC/WO and MC for participatory monitoring

CDO (m/f) and SDFO discuss the steps of participatory monitoring with VDC/WO and MC and prepare for the data collection. The preparation for participatory monitoring may take several meetings.

3. Participatory monitoring of interventions and risk mitigation measures

CDO (m/f), SDFO together with the selected community members (VDC; WO; MC) gather the required monitoring data. This step may involve several field visits. See annexes 16 and 19 (Monitoring Corrective Action Plan).

4. Analysis of progress of Management Plan

CDO (m/f), SDFO together with the selected community members (VDC; WO; MC) analyse the information gathered, answer the monitoring questions and prepare for presentation of the results for each intervention mentioned in the Management Plan.

Field

5. Reporting to community

CDO (m/f), SDFO together with the selected community members (VDC; WO; MC) present and discuss the results with VDC/WO and MCs (and other interested community members) and agree upon corrective actions if needed. This will be documented in the signed VDC/WO minutes of meeting.

Office

6. Reporting to PMU/PIC

SDFO and CDO (m/f) report the monitoring results to DFO. DFO will share the results with and report on the implications and corrective actions to PMU/PIC, with copy to Conservator of Forests.

7. Organizing files and data

The planning team organizes all information collected in the planning unit, both soft and hard copies, including a copied of the signed minutes of meeting of VDC/WO.

Annexes

Annex 1: Specimen workplan for planning teams

S/No	Activity	Required Days												Venue	Responsability	Format/Perfromra	Means of Verification	
		1	2	3	4	5	6	7	8	9	10	11	12					
1	step-I Preparation for PFRMP																	
1.1	Constitution of planning team,work plan finalized													DFO office	DFO			
1.2	Collect and analyse secondary data (based on previous interventions)													DFO office	CDO (M.F)SDFO,			
1.3	Baseline GIS Map														GIS.PMU

Annex 3: Secondary data of potential Planning Unit

Format for Secondary Data Collection

I. GIS map of the area	Indicate available data as much as possible on map	Source
II. General information		
1. Name of mouza village in which Planning Unit is located		Local Gvt Dept
2. Name of Forest Sub-division		FD
3. Name of Forest Division		FD
4. Name of Forest Circle		FD
5. Main settlements in revenue village	Settlements 1. 2. 3. 4. 5.	Local Gvt Dept Population census
6. Altitude		FD
7. Distance from Divisional Forest Office		FD
III. Village infrastructure		
8. Road conditions		FD
9. Water supply (springs; locations)		PH&ED
IV. Natural resources		
10. Forest Ecological Zone		FD
11. Designated forests		FD
a. Protected Forests	Area:	
b. Reserved Forests	Area:	
c. Guzara Forests	Area:	

12. Village/communal forest/rangeland/ waste lands	Area:		
13. Interventions in forests/rangelands			FD
a. Plantation/sowing	Area:		
b. Enclosures for natural regeneration	Area:		
c. Range management (controlled grazing/cutting)	Area:		
d. Wildlife sanctuary	Area:		
e. Others	Area:		
14. Agriculture	Rainfed (area.....)	Irrigated (area.....)	Agric Dept
	Major crops (including fodder crops)	Major crops (including fodder crops)	Agric Dept
Farm forestry activities (what; where; how many plants)			FD
15. Livestock (number)	Cows Buffaloes Goats/sheep Horses/donkeys		Livestock Dept
Veterinary clinic			Livestock Dept
16. Availability of working plan/ VLUP/Management plan/village plan			FD
17. Interventions implemented under working plan/ VLUP/Management			FD

plan/village plan and years of implementation		
V. Human Resources		
18. Population of mouza village (split out per main settlement)	1. 2. 3. 4. 5.	Population census
19. Village organizations		
a. Village Development Committee (for natural resource management) (name and purpose)		FD
b. Women Organization (for natural resource management) (name and purpose)		FD
c. Other village or social welfare organizations (name and purpose)		Social Welfare Dept
20. Projects/organizations/ departments working in the mouza village (NGO/Government)		Tehsil/District

Annex 4: Stakeholder analysis

The Planning team will make a stakeholder analysis with the participants of the male and female community meetings (focus group discussions).

Stakeholders

Definition of stakeholder

Individuals, groups or organizations/institutions having an interest in the forest and rangeland resources of a defined area and may influence or be (positively or negatively) affected by a Forest Resource Management Plan.

Primary or direct stakeholders

Those individuals, groups or organization/institutions having a direct interest in forest and rangeland resource management either as owner, shareholder, concessionary or de facto user, and being directly responsible for successful sustainable management of the forest resources in the planning unit.

Secondary or indirect stakeholders

Those individuals, groups or organization/institutions influencing or facilitating indirectly the forest and rangeland management in the planning unit, e.g., service providers to direct stakeholders such as providing supplies or (legally or illegally) purchasing produce from the forest users; federal or provincial government departments providing the legislative framework for forest resource management; local politicians; or those being indirectly dependent on sustainable forest management, e.g. water users downstream.

Both primary and secondary stakeholders are important for successful preparation and implementation of a forest resource management plan. For determining the boundaries of the Planning Unit, we limit ourselves to the primary stakeholders.

Stakeholder analysis

Table 1: List of Stakeholders, type of use and locations

	Name of stakeholder/ section (1)	Number of households (2)	Location of residence (3)	Location of ownership (also put on map) (4)	Type of use of forests or rangelands (also put on map) (5)	Location of use (also put on map) (6)
1						
2						
3						
4						

5						
6						
7						
8						
9						

Step 1: Prepare a list of stakeholders

Prepare together with the participants a list of primary stakeholders and number of households. Use checklist 1 below to identify primary stakeholders. Fill out the name of the stakeholders in **table 1** (column 1 and 2) above.

Step 2: Location

Discuss the place of living or seasonal residence of each stakeholder. Use checklist 1 below to identify location of stakeholders. Fill out the location of residence of stakeholders in **table 1** (column 3) above. Put location on the map (GIS map if available and community map when the map has been prepared in the next activity (see annex 5).

Step 3: Ownership of forest and rangeland area

Discuss ownership of forest and rangeland resources. Fill out ownership of area by stakeholders if any in **table 1** (column 4) above. Indicate which area is controlled by absentee landowners, if any. Put location of ownership of area by stakeholders on the map (GIS map if available and community map when the map has been prepared in the next activity (see annex 5).

Step 4: Use of forest and rangeland area

Discuss use of forest and rangeland resources. Use checklist 2 below to identify type of use of forest and rangeland resources by stakeholders. Fill out location and type of use of area by stakeholders if any in **table 1** (column 5 and 6) below. Put location and type of use of area by stakeholders on the map (GIS map if available and community map when the map has been prepared in the next activity (see annex 5).

Step 5: Definition of community area

Discuss what the participants consider the area of their community (not necessarily the administrative boundaries of the village, but their community area/estate (sometimes called 'dafter'). Indicate on the map (GIS map if available and community map when the map has been prepared in the next activity (see annex 5).

Checklist 1: Potential primary stakeholders (male and female) (not limited)

	Stakeholder	Location of residence (put on map)
1	Owner (shareholders in hillsides) ²	Living in main village
		Living in hamlet
		Absentee
2	Owner (non-shareholders in hillsides)	Living in main village
		Living in hamlet
3	Tenants	Living in main village
		Living in hamlet
4	Gujars (settled)	Living in main village

² Ownership can be communal, divided among clans (*khels*), or individual families

		Living in hamlet
5	Gujars/Ajars (seasonal) ³	Residing hamlet
6	Artisans	Living in main village
		Living in hamlet
7	Mining company	Location quarry
8	Tourism company	Tourist spots
9	Provincial Government	Designated forests
10	Others	

Checklist 2: Potential use of forest resource area

	Use of forest resources
1	Timber
2	Fuelwood
3	Grazing
4	Grass cutting
5	Collection of shrubs and forbs
6	Collection of other products, such as mushrooms, pine nuts, pine needles, vegetables, medicinal plants
7	Stones and minerals
8	Agriculture (encroachment; slash and burn)
9	Tourism spots
10	Hunting/fishing
11	Labour/employment
12	

³ Indicate time of year when residing in the planning unit

Annex 5: Preparation of a community map

The Community map, prepared by community members, shows what community members perceive as important features or aspects of their community and the ownership and use of their forest resources. For example, experience has shown that women rather draw a map of their neighbourhood ('*mohallah*'), their direct living environment, than of the complete village area. The map is a good instrument for a discussion on the situation in the community and the ownership and use of their forest resources and for crosschecking information. It can be referred to during all steps of the planning exercise.

Main features on the map

For example:

- village boundaries
- roads/streets/paths
- rivers, streams, nallahs, lakes
- residential area
- mohallahs/hamlets
- farm fields (irrigated/rain fed)
- farm forestry plots
- forest/plantation/rangeland/alpine areas
- communal land
- tube wells and springs

Indicate on map (see tables above)

- a) location of residence of community sections
- b) area of ownership by different community sections
- c) use by the different community sections
- d) type of use of the forest and rangeland by different community sections
- e) areas under conflict (indicate who is involved and nature of conflict)

Note: Indicate authors and date of preparation on the map

Materials needed

- Brown paper or sheets of flipchart
- Markers with different colours

Alternative:

Use a GIS map as basic map to discuss and indicate the information of the community.

Annex 6: Selection criteria, indicators and means of verification for planning units at field level

Overall pre-selection and ranking of planning units takes place at Divisional level see below at the end of this annex. The process of selection and ranking of villages at Divisional level guides the planning team to starting the PFRMP process in a planning unit located in a particular revenue village. At field level the following criteria are cross-checked:

Criterion	Indicator	Means of verification	Check
1. Area controlled by absentee landowners	1.1 Not more than 40% of area	1.1 Ownership map prepared in focus group discussion with community and cross checked in stakeholder interviews; transferred to GIS map	
2. Households in the planning unit	2.1 At least 100 households	2.1 Data from community in focus group discussion and cross checking in stakeholder interviews	
3. Conflicts on land and land management in the area or with neighbors	3.1 Presence/absence of major conflicts	3.1 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
4. Village Development Committee (VDC)	4.1 Existence or readiness to establish a VDC that includes representatives of all major sections of the area (owners, informal users including all semi-residential livestock owners)	4.1 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
5. Women Organization (WO)	5.1. Existence or readiness to establish Women Organization (WO)	5.1. Data from community in focus group discussion and cross checked in	

	that includes women of all major community sections in the planning unit and to establish a WO-subcommittee of female users for each hamlet.	stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
6. Participatory Forest Resource Management Plan (PFRMP/VLUP)	6.1 Readiness to create (or update) a Participatory Forest Resource Management Plan (PFRMP/VLUP) and 6.2 Written Free, Prior and Informed Consent (FPIC) as first step in the planning process	6.1 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
7. Controlled use	7.1 Readiness to organize the controlled use of the area	7.1 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
8. Distribution of rights, concessions and benefits of forest resources	8.1 Readiness to work towards agreed upon distribution of rights, concessions and benefits	8.1 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed Resolution by the VDC/WO or male/female elders of the community	
9. Community contributions for forest protection	9.1 Readiness by the VDC to provide their community contributions for forest protection	9.2 Data from community in focus group discussion and cross checked in stakeholder interviews and laid down in signed	

		Resolution by the VDC/WO or male/female elders of the community	
--	--	---	--

Note:

Pre-selection of Planning Units at Divisional level

Pre-selection of Planning Units was done according to the following criteria:

- Areas with at least 100 hectares of BTAP/10BTTP interventions
- Potential for new interventions, afforestation (more than 50 hectares), enclosures and other potential interventions (e.g., range management, ecotourism, NTFP) to improve the livelihood of the community
- Absence of major conflicts on land/land management within the area and with neighbouring areas/villages that could hamper afforestation, enclosures or implementation of other interventions of the PFRMP as known by the CCFEWD
- No land acquisition for major infrastructural works (including housing societies, industrial complexes etc.) or mining activities affecting project activities
- No other organizations working on participatory forest management

Next, ranking of planning units is done according to:

1. Size of BTAP/10BTTP interventions (ranking by size; weighted ranking)
2. Condition of BTAP/10BTTP interventions (survival rate)
3. Accessibility of main village (type of road)
4. Ease of working with community (willingness)

Annex 7: Planning and reporting awareness raising meetings

Preparation of Awareness Raising Meetings

1. Make a list of all community sections and their place of residence in the Planning Unit. If seasonal users (e.g., Gujars; Ajars) are not living in the Planning Unit and are not present at the time of the awareness raising sessions, indicate their place of residence at time of use and time that they live in the area. See columns 1 and 2 in table 1 below.

Note 1: Make two tables: one table for the male and one for the female community members.

Note 2: Refer to stakeholder analysis to include all community sections.

2. Fill out the third column to indicate how you are going to reach out to the community section. Examples: meetings in a particular hujra on a particular day, meeting in a mosque, meeting at a marketplace, contacting through a particular person

Table 1: Community sections, place of residence and ways to reach out to sections

	Community section	Place of residence	Way to reach out
1			
2			
3			
4			
5			
6			
7			
8			

3. Prepare a timetable with activities, when to do the activity and who is responsible to implement the activity. See table 2.

Table 2: Activities and timetable of awareness raising activities

	Community section	What to do	When to do	Who is responsible
1				
2				
3				
4				
5				
6				
7				
8				

Reporting awareness raising activities

Record and file the results of your awareness raising activities per community section. See table 3. Make sure that community members sign the minutes of the meeting.

Table 3: Record of Awareness Raising Activities

	Community section:		
	Activities	Number of participants	Observations and remarks made by participants
1

Annex 8: Participatory Rapid Resource Assessment of Forest and Rangeland areas

Observation sheet: assessment of forest and rangeland resources

(to be filled per land cover type = homogenous area of vegetation)

Name Planning Unit		Name Revenue Village	
Land cover type on map		Name Division	
Longitude		Latitude	
Altitude		Forest type	

Date of observation	
---------------------	--

Name Observer		Position	
Name Observer		Position	
Name Observer		Position	
Name Observer		Position	

GPS-coordinates

GPS coordinates of boundaries of area: (name)				

Physical land features

			%		%		%		%		%
1	Soil	Rock		Shallow		Deep		Gravel			
2	Major land cover	Natural Forest		Plantation		Range		Arable		Other	
3	Erosion status	Pedestal		Sheet		Gully		Rill			
4	Slope steepness	Steep		Moderate		Plain					
5	Land form	Mountain		Piedmont		Dune		Riverine			

Vegetation

Species (in order of highest cover)	Natural (N) or Planted (P) or Sown (S)	Density (dense; ½ open; open; disperse; absent)	Status (healthy (H); overused (O); underused (U))	Use (see note)	Conditions and risks (see note)	Potential interventions
Forest type						
Trees						
1						
2						
3						
4						
5						

Shrubs						
1						
2						
3						
4						
Grasses/forbs						
1						
2						
3						
4						

Note 1: Use: timber, fuel, grazing, fodder, non-timber forest products

Note 2: Drivers for deforestation/land degradation

- natural causes (fire; diseases/pests; floods/erosion; drought)

- anthropogenic causes (agricultural expansion; shifting cultivation/fires; overgrazing; logging; fuelwood collection; mining; dams; roads; conflicts)

Plantations and enclosures

Name of plantation/enclosure	
Date of establishment	
Legal status	
Size of plantation	
Composition of the vegetation	
Status of vegetation (survival rates/density)	
Use (timber/poles; fuelwood; grazing; grass cutting; NTFP)	
Conditions and risks	
Potential interventions (trees; shrubs; grasses; NTFP)	

List of potential interventions:

- natural regeneration/enclosures;
- sowing/planting;
- controlled grazing/use of grasses;
- controlled fuelwood/shrub collection;
- controlled thinning/harvesting of trees;
- controlled collection of NTFPs;
- erosion control measure: construction of checkdams; soil bunds, contour line planting
- prohibition of mining;
- others.....

Annex 9: Checklist for informal interviews or informal community meetings

Key Issues

- 1) Use of trees, shrubs and grasses/forbs for
 - a) Construction
 - b) Fuel (major sources and daily consumption)
 - c) Grass cutting
 - d) Grazing
 - e) Other uses: medicinal plants, mushrooms, wild vegetables, pine needles, pine nuts.....
- 2) Presence of livestock in the area
- 3) Commercial marketing of tree/shrub/grass and other products from forest/rangeland
- 4) Major sources of income per user group/section
- 5) Land and tree tenure arrangements
- 6) Rules and regulations regarding land use management and distribution of benefits
- 7) Role of women in land management (control and use of the forest and rangeland products)
- 8) Current tree planting practices
- 9) Social organization
- 10) Changes in forest and rangeland resources during the last 30 years

When asking questions to the community members on an issue use following probes:

- What
- Who
- Why
- Where
- When
- How

Note: Write down observations and answers from community members in notepad.

Annex 10: Data analysis

Purpose

- Consolidate the collected data from the participatory rapid assessment of forest and rangeland resources and the socio-economic assessment
- Make the data ready for presentation and cross-checking with the community, and for inclusion in the PFRMP report (step 4)

How to do the data analysis?

2. Work **together** as planning team, both forestry (SDFO) and social professionals (CDOs male and female). Share your collected data, for example on use and ownership.
3. Organize the data
 - According to community section
 - According to land cover type
 - According to previous BTAP/10BTTP and other old plantations and enclosures
4. Discuss the collected data, identify similarities and contradictions (issues to be cross-checked). Draw together conclusions on use, ownership/rights and major problems and potential solutions in forest and rangeland resources, and general village problems
5. Make consolidated maps in cooperation with the PMU GIS-lab and tables per subject for the planning unit.
6. Maps:
 - PU location map with boundaries and settlement information
 - Land cover map
 - Map with existing interventions: BTAP/10BTTP and other old plantations/enclosures
 - Land use map: timber/poles; fuelwood collection; grazing; grass cutting; NTFP collection; hunting; mining
 - Map of land ownership, rights, control and use by sections
 - Map with proposed management units/ sub-units/ blocks and subblocks
 - Map with proposed interventions

Tables:

Forest and rangeland resources tables

- Tables with vegetation of land cover types, condition and potential
- Tables with existing plantations and enclosures, condition and potential
- Table with short description of changes in forest and rangeland area during the last 30 years

Socio-economic tables

- Table with general characteristics, infrastructure and facilities
- Table with short history of the village (major events)
- Table with community sections and place of residence
- Table with community sections, number and composition of households
- Table with social stratification and vulnerable community members
- Table with social organizations
- Table with major sources of income and dependency on forest and rangeland resources

- Table with major farming systems
- Table with number of livestock per section and fodder sources
- Table with division of labour between men, women and children regarding use of forest and rangeland resources
- Tables with main sources of construction materials, fuel and fodder
- Tables with use of forest and rangeland resources
- Table with use of existing plantations and enclosures
- Table with utilization, estimated production and value of existing plantations and enclosures
- Table with legal and customary ownership and use rights on forest and rangeland resources

Table with existing rules and regulations for use of the area

Tables with conclusions and recommendations

- Table with conclusions and recommendations on social composition, social organization and economic and livelihood strategies
- Table with conclusions and recommendations on use of forest and rangeland resources
- Table with conclusions and recommendations on ownership, rights and control
- Table with changes in forest and rangeland resources during the last 30 years and reasons for changes
- Table with main problems in forest and rangeland management (rights; use; control)
- Table with potential interventions regarding forest and rangeland (what; where)
- Table with main community problems and possible solutions in the planning unit

* Use for calculation of consumption of fodder and gap analysis the following standard:

Livestock	Fodder use: kg/head/year
Buffaloes	3285
Cattle, horse, donkey	1825
Goats/sheep	365

Annex 11: Socio-economic data collection of ownership, use and control of forest and rangeland

Note: to be filled per community section (male and female) in focus group interviews

Name Planning Unit		Name Revenue/ Mouza Village	
Name Community Section/Khel		Location of interview	

Date of interview	
-------------------	--

Name interviewer		Position	
Name interviewer		Position	
Name interviewer		Position	
Name interviewer		Position	

1. Community section and estimated number and composition of households

No	Name of section	No of HHs	Average HH size 8,7 persons	Children (below 18) 5,6/HH or 65%	Men 1,5/HH or 17%	Women 1,6/HH or 18%
1						

2. Social Stratification: Percentage of upper, middle and lower class community members, sections and description of criteria for classification

Strata	Percentage of population	Sections	Description/ criteria
Upper class			
Middle class			
Lower class			

3. Vulnerable community members

Group	Number of people	Background of vulnerability
Female headed households		
Disabled people		
Tenants		

4. Main sources of income

Nr	Name of section	No of HHs	Main Source of income (%)					
			Forest and Rangeland	Agriculture	Govt. Service	Foreign remittances	Trade	Others (e.g. daily wages)
1								

5. Description of farming system of section

No	Major farming system of section	Name of section:
1.	Predominantly agriculture based (mix)	
2.	Predominantly livestock based (mix)	
3.	Agriculture	
4.	Livestock	
5.	(Semi-)nomadic livestock raising	

6. Agriculture

Annex 14: Specimen of Agreement between VDC/VO and Forest Department

GENERAL AGREEMENT BETWEEN VILLAGE DEVELOPMENT COMMITTEE (VDC) AND WOMEN ORGANIZATION (WO) AND FOREST DEPARTMENT UNDER THE BTASP PROJECT

THIS GENERAL AGREEMENT (hereinafter the “**Agreement**”) is being entered on this ____ day of _____, 20____ (hereinafter the “**Signing Date**”) by and between:

Forest Department through Divisional Forest Office (hereinafter referred to as “**Party A**”)

AND

Community of Planning unitrepresented by Village Development Committee (VDC) and Women Organization (WO) (hereinafter referred to as “**Party B**”)

*(Party A and Party B shall hereinafter be collectively referred to as “**Parties**” and individually as Party)*

WHEREAS:

This Agreement is being entered into by and between the Parties for the purposes of implementation of the Participatory Forest Resources Management Plan (PFRMP) (appended herewith to this Agreement as “**Annex ‘A’**”) under the BTASP Project of the Khyber Pakhtunkhwa Forest Department. The terms and conditions of this agreement are as follows:

1. TERM

- i. The term of this Agreement shall begin from the _____, 20_____
- ii. The PFRMP Planning document including all activities is valid for 10 years.
- iii. The financial liability of BTASP for all interventions mentioned in the PRFRM are valid until the end of the project as up to the end of June 2027. PFRMP measures not executed until June 2027 will not be financially supported.

2. OBJECTIVES OF THE AGREEMENT

- i. To work towards the responsible and transparent implementation of the PFRMP activities so as to ensure the sustainable management and protection of the forest and rangeland resources.
- ii. To encourage the community, which includes owners, right holders, and users for sustainable use of forest and rangeland resources.

3. SCOPE OF THE AGREEMENT

This Agreement will be a legal document between VDC and WO planning unit _____ and Divisional Forest office _____ for the

implementation of the _____ Participatory Forest Resource Management Plan.

4. ACTIVITIES

- i.** The forest and rangeland management activities to be undertaken under this agreement are specified in the 5-year PFRMP of the _____ Planning Unit, which includes the following interventions:
 - a.** Forest resources management
 - b.** Rangeland management
 - c.** Livelihood activities
 - d.** Capacity building

Note: further details of these interventions are in the PFRMP appended herewith as Annex “x”

5. RIGHTS AND OBLIGATION OF THE CONTRACTUAL PARTIES

i. Rights and obligations of “Party A”

- a. Provide technical support to the implementation of the PFRMP.
- b. Provide financial support for the agreed interventions in PFRMP as per the prescribed procedure of the BTASP project PFRMP implementation guidelines (“IG”).
- c. Organize trainings and provide technical advices to the VDC, WO, and Management Committees for the implementation of the interventions in PFRMP.
- d. Technical and financial monitoring of the agreed PFRMP Operational Plan together with the VDC, WO, and Management Committee as per the monitoring plan.
- e. Party A shall ensure that before the implementation of any intervention, all the stakeholders, including owners, rights holders, and users are consulted as per the rules and procedures of the Free, Prior, and Informed Consent (FPIC) as stipulated in PFRMP.
- f. In addition, they must ensure that such FPIC consultations and other ESMF related checks are recorded in writing and signed by Party B.
- g. Party A will set up under the ESMF a Grievance Resolution Mechanism where complains can be addressed. The contact person for such complains are as follows:

Mr. Muhammad Junaid Dayar,
Palosi Road, Aman Abad, Opposite PFI, Near Peshawar Zoo, Peshawar,
Tel: 923009591191 , Email: pd.btaspforest@kp.gov.pk

Mr. Muhammad Ibrahim Khan,
Palosi Road, Aman Abad, Opposite PFI, Near Peshawar Zoo, Peshawar,
Tel: 923009596367, Email: ibrahimrazmian@gmail.com,

ii. Rights and obligation of “Party B”

- a. Party B shall implement the PFRMP, as per the terms of the Operational Plan approved by both Parties.
- b. Party B shall ensure the selection of location and project beneficiaries as per the prescribed criteria.
- c. Party B shall constitute Management Committees for interventions of the PFRMP
- d. Party B shall ensure community contribution as prescribed in the PFRMP.
- e. Monitoring of the PFRMP intervention jointly with the Forest Department as per the monitoring plan.
- f. Party B shall keep, maintain and update the record of financial and technical records of the PFRMP in a transparent manner in both hard and soft form.
- g. Party B shall ensure that before the implementation of any intervention, all the community stakeholders, including owners, rights holders, and users are consulted as per the rules and procedures of the Free, Prior, and Informed Consent (FPIC) as stipulated in PFRMP.
- h. Party B, shall agree with the mechanism for the protection, sustainable use of the forest resources.
- i. Party B agrees that the 10-year PFRMP management plan will be continue to be implemented and follow up by the VDC and WO.
- j. Party B agrees that, existing Hand over Agreements done under 10BTTP where BTASP will carry out interventions, will be reviewed und updated. The updated Hand Over Agreements will be duly signed and replace the old one.
- k. In addition, they must ensure that such FPIC consultations are recorded in writing as part of the Minutes of Meetings and signed by Party B.

6. GENERAL COMMITMENT

- i. The Parties agree and acknowledge that this Agreement cannot be used as documentary evidence by any Party to assert their rights locally and before the courts for their internal disputes not related to this Agreement.

7. CONDITIONS OF THE AMENDMENT AND EXTENSION OF THE AGREEMENT

- i. Either Party may amend the Agreement if required. However, such amendments must be mutually agreed by both Parties in writing.
- ii. After the project duration the PFRMP implementation may be extended with mutual consent of both Parties.

8. TERMINATION OF THE AGREEMENT

- i. If Party A wishes to terminate the Agreement, they may invoke Rule 22 of the Joint Forest Management (Community Participation), Rules, 2004 (“**CP Rules**”).
- ii. If Party B wishes to terminate the Agreement, they may invoke Rule 19(4) read with Rule 11(f) of the **CP Rules**, 2004.
- iii. Neither Party may unilaterally terminate the Agreement without first seeking to resolve any disputes amicably.

9. DISPUTE RESOLUTION

- i. The Parties shall use their best efforts to settle amicably all disputes arising out of or in connection with this Agreement.
- ii. In the event where any dispute, difference or question arises out of or in connection with this Agreement, and / or arising due to a breach of this Agreement, the aggrieved Party shall promptly serve upon the other Party a notice stating such disputes, differences or questions (the “Dispute Notice”). Upon the receipt of the Dispute Notice by the other Party, the Parties shall use their best efforts to amicably resolve such disputes, differences or questions through mutual consultation and negotiation within [30 (thirty)] days from the receipt of the same. If the Parties are unable to resolve such disputes, differences or questions within the above stipulated 30 (thirty) day period, the matter shall be referred to mediation.
- iii. In the event where any dispute, controversy or claim arising out of or relating to this Agreement or the breach, termination or invalidity thereof cannot be amicably settled through mutual consultation and negotiation, the Parties shall move towards mediation. Each Party shall nominate a mediator. The Parties agreed that they shall select a mediator who has no connection, interest, or relation with the project to ensure objectivity. Both parties must mutually agree on the appointment of the 2 (two) mediators. The Mediators shall attempt to resolve the dispute within [thirty (30)] days from the date of the appointment of the mediators.

The venue for the mediation proceedings shall be at _____, Pakistan. The language of mediation and the appropriate documentation shall be _____.

The decision of the Mediators shall be final and binding.

10. DISPUTE RESOLUTION WITHIN THE COMMUNITIES

- I. If any community member (men, women or child; residential or semi-residential) feels disproportionately disadvantaged because of this Agreement and the PRMFP the community member may refer to the following procedure:

- a. **Step 1:** Presentation of issue to VDC/VO and SDFO/CDO (m/f). The person concerned or his/her representative can ask to discuss his/her case in a meeting of the VDC/VO and the SDFO/CDO. This request can be in oral or written form. If the case is not satisfactorily solved, a next step can be taken on initiative of the community member. (Time limit for redressal at this stage: **seven (7) Days**)
- b. **Step 2: Presentation of issue to DFO:** The person concerned, or his/her representative can ask to discuss his/her case in a meeting with the DFO and the (AD)CDE&GAD (m/f). This request can be in oral or written form. If the case is not solved satisfactorily, a next step can be taken on initiative of the community member. (Time limit for redressal at this stage-(fourteen)14 Days)
- c. **Step 3: Presentation of the issue to CF:** The person concerned, or his/her representative can ask to discuss his/her case in a meeting with the CF and PD or authorized representative from PMU and Director or Deputy Director CDEGAD. This request should be in written form. The decision of this forum is final. (Time limit for redressal at this stage thirty (30) days)

11. NO LIABILITIES

- a. The Parties hereby acknowledge and agree that the BTASP project is a separate and independent project from the 10BTTP project, and by virtue of which no alleged liabilities, claims, charges that currently exist in the BTAP project can be carried forward or claimed under this BTASP project.
- b. Moreover, Party B agrees and acknowledges that it cannot seek to claim for any alleged liabilities that were raised under the 10BTTP project under the BTASP project, and that the BTASP project shall have no responsibility towards any claims or liabilities that were raised under the 10BTTP project.

To be distributed to the following personnel / individuals:

1. —

2. —

3. —

4. —

Annex 17: Risk screening and mitigation tool

How to use the risk screening tool

1. This tool will be used to screen each intervention separately to identify potential risks and propose mitigations measures;
2. This tool is to be filled out using the information obtained from Step 1 to 3 of the PFMRP by the Divisional Planning Team (CDOs + SDFO)
3. To be signed off by the DFO

Notes:

When using this tool, please refer to the Risk Matrix summary (Section 4.1) as a starting point, and use the same to assess risk levels and identify mitigation measures and opportunities accordingly.

During FPIC discussions on project impacts, the facilitators should use simplified language.

Risk Screening and Mitigation Tool

(Office work)

Type of intervention: _____

Location of implementation: _____

Filled by: _____

Date: _____

		Yes	No
ESS 1: Restriction of Access and / or Resettlement			
1.1	Risk of resettlement of communities?	☐	☐
1.2	Could the intervention result in restriction in peoples' access (users or owners) to or use of NRM (land, forests, grazing grounds)? a. Land: Y/N - if yes, P/T b. Forests: Y/N - if yes, P/T c. Water Bodies: Y/N - if yes, P/T d. Grazing Grounds: Y/N - if yes, P/T e. Movement routes: Y/ N – if yes, P / T f. Other P: Permanent T: Temporary	☐	☐
ESS 2: Indigenous Peoples & Local Communities			

2.1	Are there any indigenous peoples & local communities present in the planning unit, and / or any such groups, such as nomads and / or pastoralists who make use of the natural resources?	☐	☐
2.2	Could the project interventions impact the following rights of local communities: i. Land rights: Y / N ii. Livelihoods: Y / N iii. Rights of women: Y / N iv. Rights of children: Y / N v. Rights of religious minorities: Y / N	☐	☐
ESS 3: Community Health, Safety and Security / Labour & Working Conditions			
3.1	Will the intervention be providing support to the project staff or the project communities in the form of arms or ammunition?	☐	☐
3.2	Could the project activity contribute to increased risk of violence or abuse (physical, sexual, emotional, etc.) towards communities/individuals?	☐	☐
3.3	Could the activity lead to increased safety risks for communities or individuals or staff in terms of following: a. Increased exposure to natural hazards such as: i. Forest Fire: Y / N ii. Floods: Y / N iii. Land sliding: Y / N iv. Other: Y / N b. Dangerous working conditions: Y / N c. Accidents or injuries including from: i. human-wildlife-conflicts: Y / N ii. road safety & transportation: Y / N iii. infrastructure: Y / N iv. Blasting and quarrying: Y / N v. transportation of stones / boulders: Y / N vi. Non-provision of PPE kits: Y / N	☐	☐
3.4	Could the Intervention lead to increased health risks for communities or individuals?	☐	☐
3.5	Could the activity lead to the employment of individuals under the age of 18?	☐	☐
ESS 4: Cultural Heritage			
4.1	Could the intervention lead to any damage or any form of blockade to cultural or heritage sites or lead to any pressures or disturbance to cultural values and / or social values? (Intangible or Tangible)	☐	☐

4.2	Could the intervention utilize cultural or heritage sites for commercial or other purposes?	☐	☐
ESS 5: Biodiversity Conservation and Sustainable Management of Natural Resources & Resource Efficiently & Pollution Prevention & Management			
5.1	Does the intervention support economic or livelihood activities that might lead to unsustainable use or extraction of natural resources?	☐	☐
5.2	Could the project intervention cause any type of adverse impacts on biodiversity, on the integrity of terrestrial or ecosystems, or on ecosystem services? Consider: 1. Ecotourism: Y / N 2. Waste production: Y / N 3. Inadequate waste disposal: Y / N 4. Removal of vegetation cover: Y / N 5. Creation of soil erosion: Y / N 6. Introduction of alien, exotic, and invasive species: Y / N 7. Extraction, diversion or containment of surface or groundwater: Y / N 8. Leakage or added pressure on other ecosystems: Y / N	☐	☐
ESS 6: Pest Management			
6.1.	Does the activity promote the use or procurement of pesticides, which could potentially have an adverse impact on human health or the environment? * <i>*Consider use of pesticides that contain active ingredients that are banned or restricted under applicable international treaties and agreements, meet the criteria of carcinogenicity, mutagenicity, or reproductive toxicity as set forth by international agencies.</i>	☐	☐
ESS 7: Stakeholder Engagement and Conflict Management:			
7.1	Are there existing and / or underlying tensions / conflicts between the project communities?	☐	☐
7.2	Could our intervention lead to creation of new conflicts or lead to increasing of existing conflicts? * <i>(*one example could be relating to distribution of project benefits leading to conflicts between communities)</i>	☐	☐
7.3	Are some groups (stakeholders, rights holders) irrationally benefiting more than others?	☐	☐
7.4	Will the intervention impact the rights of women in a negative manner or cause problems in their day-to-day life?	☐	☐

Summary of safeguard-related risks

Name	Title	Signature	Date
	DFO		

Annex 18: FPIC consent form

How to use the FPIC form

The Environmental & Social Mitigation Plan in Tool 1 developed for each intervention that is to be implemented in each Planning Unit should be combined in the FPIC form. The FPIC form should then be presented to the Management Units in consultative sessions for their feedback and approval. This tool should be then signed by the relevant representatives of each VDC / WO / Management Committee. Please refer to Action 1 in the ESMF action plan.

BTASP PROJECT - COMMUNITY APPROVAL & CONSENT FORM (Community Tool)

Project Title	BTASP (Billion Tree Afforestation Support Project) Khyber Pakhtunkhwa Province
Duration	In the province: 2023-2028 In this forestry planning unit:
Forestry planning unit	Forest division: Name of planning unit:
Name of Planning Unit:	
Languages of this form	Urdu
Date	

S#	Activity / Intervention	Standard (Risk)	Impact (Risk)	Proposed mitigation

This portion shall be filled in by the executive body of the VDC / Management Committee

Acknowledgments	Yes	No	No answer
We acknowledge that the project's objective and interventions and related impacts and risks have been explained to us and we understand them.			
We acknowledge that our members have been given the opportunity to ask questions about the project and the Forest Department have responded to it satisfactorily at this time.			
We acknowledge that the feedback collection and grievance resolution channels for the project have been explained to us and we understand them.			
We, the undersigned, confirm that there is broad consent in the Management Unit of this forestry planning unit to the project's interventions as outlined above and our participation in these interventions/activities as required. We agree to the recording and archiving of any verbal and non-verbal data or information (except for personal information), as provided by us and as relevant to the project, and the use of the same in research and analysis and other published outputs for the project.

Annex 19: ESMF Monitoring & evaluation and corrective action plan (MACP)

How to use the monitoring & evaluation and corrective action plan template

- This is to be filled and completed by the DFO.
- This is a support tool for monitoring.

Monitoring and Evaluation & Corrective Action Plan

Planning Unit: _____

Date: _____

Name & Signature of DFO: _____

Monitoring & Corrective Action Plan

(To be filled in by DFO)

Risk No.	Mitigation Code no.	Status (Resolved / Unresolved) provide explanation	If unresolved, provide next steps to ensure resolution	Timeline (if unresolved)	Responsibility

Any new risk(s) Identified? - Y/N

Risk No.	Intervention / Activity	Details	Proposed Mitigation Measures	Responsibility	Timeline and Proposed Budget

To be distributed to the following personnel / individuals:

1. _____
2. _____
3. _____

Annex 20: Summary of steps of PFRMP

Step 1: Preparation for Participatory Forest Resource Management Planning

Objectives

- Planning Team prepared for the Participatory Forest Resource Management Planning Process
- Eligible Planning Unit selected confirmed and its boundaries defined
- Awareness created with the community members in the planning unit on Participatory Forest Resource Management Planning.

Result

- Written resolution (Consent of Cooperation) adopted by representatives of all community sections (owners and users of forest and rangeland resources) in the planning unit on cooperation in the development and implementation of a Participatory Forest Resource Management Plan.

Activities

1. DFO notifies Planning Team (SDFO, CDO (m&f), Forester, Forest Guards, GIS expert).
2. Preparation of a workplan for PFRMP in the selected planning unit.
3. Preparation of GIS base map and collection of secondary data.
4. Community mobilization meetings (introductory meeting, and general community meetings including stakeholder analysis and social mapping)
5. Meetings with local communities are held to discuss the non-technical summary of **the ESMF**, provide them with information on the project, risks and mitigations, and provide with the space to give feedback and sufficient time to decide if they wish to be part of the project or not through a written resolution
6. Go/no-go decision on working in planning unit.
7. Additional awareness raising meetings regarding BTASP, including initial FPIC Stakeholder engagement activities to inform the communities **about ESMF** (Free, Prior, and Informed Consent).
8. **Community meetings on resolution of cooperation (Consent of Cooperation)**
9. Reporting to DFO.

Step 2: Participatory rapid assessment of forest and rangeland resources

Objective

- Participatory rapid assessment of availability and condition of forest and rangeland resources.
- Identification of potential project sites and a list of activities.

Results

- Maps of forest and rangeland resources: landcover map; past interventions map; land use map; land ownership and control map;
- Table of overview of existing forest and rangeland resources
- Table with condition, risks and potential of each vegetation type
- Table with calculation of use of mature plantations
- Table of use of forest resources established by the Forest Department

Activities

1. Preparation of for data collection
2. Data collection and analysis
3. Sharing and cross-checking with community
4. Reporting to DFO

Step 3: Participatory socio-economic analysis and social organization

3a. Participatory socio-economic analysis

Objectives

- Analysis of socio-economic situation of the Planning Unit, including analysis of ownership, use and control of forest and rangeland resources
- Assessment of the social economic setups, including social institutions and relationship among stakeholders related to natural resources within the potential project sites and proposed list of activities

Results

- Tables on socio-economic situation, and ownership, use and control of forest and rangelands

Activities

1. Preparation for data collection
2. Data collection and analysis
3. Sharing and cross-checking with community
4. Reporting to DFO

3b. Social Organization

Objective

- Village Development Committee and Women Organization established or strengthened

Result

- Inclusive and registered Village Development Committee and Women Organization

Activity

1. Social Organization
2. Reporting to DFO

Step 4: Drafting of overall Participatory Forest Resource Management Plan (zoning plan) and ESMF Risk Screening Mitigation Plan.

Objective

- Management units and interventions in the Planning Unit defined through combining data from the analysis of the forest and rangeland resources and socio-economic analysis
- Overall Participatory Forest Resource Management Plan (zoning plan) prepared.
- Environmental and social safeguards risk screening conducted, and Draft Environmental & Social Mitigation Plan prepared
- Summary of Risk Mitigation Plan discussed with VDCs and WO for FPIC approval.

Results

- Overall Participatory Forest Resource Management Plan (zoning plan) with management units prepared.
- Risk Mitigation Plan for each intervention prepared and consent obtained from VDC and WO.

Activities

1. Analysis of field data for identification of management units (zoning) and interventions
2. Meeting DFO on proposed management units (zoning) and interventions
3. Risk screening of each intervention against all the ESS standards and propose mitigation measures
4. Compiling maps and tables for PFRMP
5. Preparing draft criteria for selection of intervention sites and beneficiaries
6. Discuss proposed division of planning unit in management units, criteria for potential intervention sites and beneficiaries with VDC and WO
7. Sharing summary of ESMF Risk Mitigation plan for each intervention with VDC and WOs and obtain their consent (FPIC Approval)
8. Sharing summary of ESMF Risk Mitigation plan for each intervention with VDC and WOs and obtain their consent (FPIC Approval)
9. Prepare an overall Participatory Forest Resource Management Plan
10. Approval and signing of overall Participatory Forest Resource Management Plan

Step 5: Drafting of Operational plan for each Management Unit (technical plan)

Objectives

- Detailed technical interventions per Management Unit identified and elaborated in a Management Plan
- Management Committee per Management Unit established

Results

- Management Plans per Management Unit including operational plans per intervention
- Management Plan Agreement signed with VDC/WO as well as contracts between VDC/WO and Management Committee per Management Unit
- Form on Free, Prior, Informed Consent as part of the Management Plan Agreement signed

Activities

1. Preparation of management plans and operational plans for each intervention
2. Detailed data collection (inventory) for each intervention
3. Elaborate 1st draft operational plan per intervention
4. General meeting of VDC/WO and potential beneficiaries on operational plans
5. Meeting with beneficiaries (owners; users) to form a Management Committee
6. Elaborate 2nd draft operational plan per intervention
7. Discussion with VDC/WO and Management Committee(s) on plans, agreements and the Grievance Resolution & Feedback Mechanism (GRFM) for feedback, suggestion and complaints.
8. Preparation of Management Plan Agreement and Contracts between VDC and Management Committee(s) and signing ceremony

Step 6: Implementation and Monitoring of PFRMP and Operational Management Plans.

6a. Implementation of PFRMP with its Operational Management Plans

Objective

- Participatory development and implementation of annual plans of operations for each intervention in a Management Unit, including contributions of community and Forest Department
- Implementation and monitoring of ESS Environmental & Social Mitigation Plan and GRFM rollout

Results

- Annual Plans of Operation for each Management Unit

- Implemented activities according to annual plans and mitigation measures according to Environmental & Social Mitigation Plans.

Activities

1. Preparation for implementation
2. Mobilization of VDC/WO and Management Committee for implementation of interventions.
3. Arrangement of VDC/WO bank account and transfer of budget to VDC/WO
4. Implementation of interventions and Environmental and Social Risk Mitigation Plan and Effectiveness Review of the GRFM conducted

6b. Participatory Monitoring of PFRMP with its Operational Management Plans

Objective

- Participatory monitoring of PFRMP and Management Plans, and Risk Mitigation Plan

Results

- Monitoring reports for PFRMP and each Management Unit
- Monitoring and corrective action plan report of ESMF mitigation measures

Activities

1. Preparation of VDC/WO and MC for participatory monitoring
2. Participatory monitoring of interventions and risk mitigation measures
3. Analysis of progress of Management Plan
4. Sharing the monitoring results with VDC, WO, MC and Reporting to DFO and PMU/PIC

Until the rollout of the GRFM, all complaints and feedback related to the shall be directed towards the following BTASP project office contact for feedback and complaints:

Annex 21: Role and Responsibilities of DFO, SDFO, CDO/FPIC Facilitator, Forest Guard, FFE

Officials	Task during implementation
Divisional Forest Officer (DFO)	- Overall steering, monitoring and reporting of PFRMP at divisional level - DFO notify the planning team for each PU - Approval of the field visit as per the workplan - Endorsement of field reports submitted by planning team - Provide technical guidance to the planning in formulation of the PFRMP. - Notification of the VDC and WO - Finalization of management units and interventions - Share draft PFRMP with Conservator for review, coordination and for final approval - Procurement of inputs, Contracting of selected beneficiaries according to beneficiary selection criteria, - Provide advice to PU and Mgt. Committee on silvicultural measures, - Coordinate with IHR&D for trainings, - Timely payment according to contracts, - Monitoring of progress, results and finances to PMU and Regional level (CF), participate on quarterly PFRMP progress meetings, - Ensure that the field staff of CDE&GAD and Forest Division have followed the FPIC and Environmental and Social Safeguard framework in the field. - Ensure that all the steps are properly followed during establishment of community-based organizations. - Responsible for reporting and monitoring through MIS system developed under the BTASP project.
SDFO	- Develop workplan based on manual jointly with CDOs - Review and prepare GIS base map, ensure technical data on the maps - Collect and analysis secondary data related to Natural Resources - Participate in general community meeting - Provide technical Inputs and advise for selection of plantation sites, selection of species and afforestation model, - Development of planting design in groups and troops, - Supervise the Forest Guard and Forester and check quality on plantation and enclose Journal development and documentation, - Supervision of Forest Guard and Forester on all PFRMP measures, - Supervision of plantation work together with VDC/WO - Monitoring of progress and results,
CDO / CDO/FPIC Facilitator	- Prepare a workplan for the PFRMP based on manual - Community mobilization and analysis of VDC and WO (status and required capacity building for PFRMP) - Conduct community mobilization meetings for development of PFRMP

	- Collection and analysis of secondary data - Conduct focus group discussions and stakeholder analysis - Conduct awareness raising meetings and sharing and cross-checking information with community - Condcut ccommunity meeting(s) for CoC (Consent of Cooperation) - Sharing of ESMF risk screening and mitigation measures with community - As a custodian of the PFRMP data file at divisional level, his role is to organize and maintain files and data of each PFRMP in his office - ESMF Risk screening of each intervention and preparation of mitigation plan - Preparation of signing ceremony for PFRMP - Liaise and coordinate with VDC/WO on all implementation issues, - Monitoring visits and feedback reporting on monthly basis to PMU.
Forester/Forest Guard	- Facilitate, plan and document the plantation and enclosure journal for old and new planation, enclosures and forest sites incl. advise on harvest quotas and sustainable use-plans for all types of forest resources, cost benefit calculation and maintenance plans, - Facilitate with VDC/WO on plantation site and species selection for new planation sites, - Facilitate with VDC/WO and Mgt. Committee planting actions, - Facilitate with VDC/WO all measures for rangeland mgt. and livelihood support, - Monitoring field implementation of all measures and report to SDFO

Annex 22: Code of Conduct and SOPs for Patrolling /Forest Warden

Preamble:

Patrolling personnel play a vital role in safeguarding the forests. This Code of Conduct outlines the ethical and professional standards expected of all personnel engaged in patrolling activities. Adherence to this code is crucial for maintaining the integrity of our forests, ensuring the safety of personnel, and fostering positive relationships with local communities.

The forest warden are recruited persons from within the community to carry out forest work and patrolling. Forest wardens are not part of the Forest Divisional staff structure and part of the official payroll. Forest wardens are either financed by forest projects or community structures to safeguard portions of forest. The forest wardens do not have any power of force nor carry any weapons.

I. Core Principles:

Integrity:	Act with honesty, transparency, and accountability in all actions. Avoid any form of corruption, bribery, or abuse of power.
Respect:	Treat all individuals, including colleagues, community members, and visitors, with respect and dignity, regardless of their background.
Professionalism:	Maintain a high standard of conduct, appearance, and performance. Be punctual, prepared, and diligent in carrying out assigned duties.
Safety:	Prioritize personal safety and the safety of others. Follow all safety protocols and use equipment responsibly.
Fairness:	Enforce regulations fairly and impartially. Avoid any form of discrimination or bias.
Confidentiality:	Maintain the confidentiality of sensitive information related to patrolling operations and investigations.

II. Specific Conduct Guidelines:

Use of force:	The forest warden does not possess the power of force and shall exercise restraint and de-escalation techniques whenever possible.
Interaction with the Public:	Engage with the public in a courteous and respectful manner. Provide accurate information and assistance when needed.
Reporting:	Accurately and promptly report all incidents, observations, and activities related to patrol duties to the VDC or Mgt. Committee.

- Equipment Use:** Use all assigned equipment responsibly and according to established procedures. Maintain equipment in good working order.
- Communication:** Maintain clear and effective communication with colleagues, supervisors, and other stakeholders.
- Personal Conduct:** Refrain from any behaviour that could tarnish the reputation of the VDC, Mgt. Committee or the KP Forest Department. This includes substance abuse, misconduct, and any illegal activities.
- Conflict of Interest:** Avoid any situation that could create a conflict of interest. Disclose any potential conflicts to supervisors.

VI. Training and Review:

- All patrolling personnel will receive thorough training on this SOP and the Code of Conduct.
- This SOP will be reviewed and updated periodically to ensure its effectiveness and relevance.

VII. Enforcement:

Supervisors are responsible for ensuring that patrolling personnel adhere to this SOP. Any deviations from the SOP will be addressed appropriately. This Code of Conduct and SOP provide a framework for ethical and effective patrolling activities. Adherence to these guidelines is essential for the protection of our forests and the safety of our personnel.
